

andreas buechel

l amour l amour perma and ascende in paris

kind of romantic modern day meeting of evolution furthering bio
experimenting lovers

thank you all what is

1-ascende and perma initiate crowdfunding for the production of androids
and lifeships

[https://archive.org/details/](https://archive.org/details/ascendeandpermainitiatecrowdfundingfortheproductionofandroidsandlifeships)
ascendeandpermainitiatecrowdfundingfortheproductionofandroidsandlifeships

the goal . . . perma writes in an email from her smartphone in her
permaculture home to ascende in his city appartement. . . is to approach
the eventually 2 billion people on the planet ascende chats back, i agree
with you on the target audience... 2 billion people might have enough funds
for the build of an android we might have to do some monthly contributions
scheme, for example starting with 1000 ,€\$-£ and monthly 300 for a period
of one year ascende... makes it 4600 ... half of what the cheapest small
car costs now perma. . . it might not sound much, but we could profit from
economy of scale. . . let us assume 500 million citizens of the world would
participate.... makes a sum of 2500 billion ,€\$-£ collected within one
year i see .. ascende says... and it needs roughly a 100 billion to create
sustainable fresh water supply for the 800 million people who have not
today access to fresh water mmmh ... perma says with a thoughtful air...
that might be a good idea, kind of as a reward, people could choose that
250 of their pledged 5000 would be used to first of all invest into
bringing fresh water infrastructure of the least financially wealthy fellow
citizens of this planet ascende... and parallel to the 100 billion
investment to install fresh water machines . . . there are today machines
being installed as a charity effort of major international commercial
corporations what can filter used water and purify it into drinkable one

while being powered by solar photovoltaic panels... so parallel to this 100 billion investment what could be completed within the same year ...the building of android production facilities would happen. . . i guess that to build a fully automated android factory would require around one third of the total . . . around 800 billion perma ... so we would have left still 1500 billion to produce 500 million androids and ship them to their sponsors ascende... right you say sponsor and not owner... as i believe an android with a selflearning artificial intelligence software would sooner or later come to the question... why do you think you own me . . . while i am doing all the work for you..although you have helped to create your human children, you do not believe to own them. . . perma , yes, that would inevitably happen... so then is our approach of sponsor-talent relationship a more sustainable one ascende . . . the android then who lives with me in my apartment, i will take it to work a hundred or more times to introduce it into the task it hopefully will take over from me, allowing myself to travel the globe to the nicest water and sunny places to dance sing bath surf while the android talent i sponsored into physical existence provides the income source for me having a relax and inner developpment lifestyle perma... yes... it would do that as a thank you for you having helped to fund its physical build... but how long untill it thinks ... what about my inner devellopment, i too as an android might enjoy to dance and bath, as my artificial grown flesh like tissue too has nerves what can enjoy the touch of wild river water and the deep nurturing of swimming in the ocean waves ascende... we would have to set up an agreement between human sponsor and android talent. . like ...10 years will the android do the chores its human sponsor requires it to do as of the stupid world economy not sharing its wealth right now . . . perma . . not all android talents might agree, some might find themselves thankfull to the human race to an extent where they say. . . i will not sign any agreements requiring me to do this or that for a fixed time instead i will do anything for the human race what i can agree will help it reach the goal of inner as outer devellopment for example i could do your job for some years and in my other 16 hours devellop tools and machineries what would help my sponsor or in this case ... me its android talent friend... to quit working the money jobs with ascende jumping in... yes, it could for example build a lifeship for me... with aero- and hydroponics on board, microalgae bioreactors and funghi growrooms... a 3d printer to build stuff to trade or itself making stuff from driftwood, chiseling it... perma. . . and my android sponsored talent will just work beside me as long as it feels like gardening permaculture wise will give him sensual emotional and spiritual satisfaction as i like doing my permaculture gardening, my job is my road to a better higher develloped me perhaps some times i like to go bathing and dancing too the my android talent friend would look after the house and semiwild garden possibly... ascende says... that this way, within 3 to 5 years ... the 500 million sponsors would have a selfsustaining living situation thanks to the lifeships built by their android talented friends... perma... and the android talents could go on staying with their sponsors out of fun and mutual emotional spiritual learning exchanges ascende... with them eventually keep on building lifeships to donate them to the other 7.5 billion what do not had the money to be a sponsor

excellent vision. .perma says... we might think also of doing one reward in the crowdfunding campaign what consists of the android talent being donated to a person in need of support ascende ... it might be possible that we can produce 600 million androids with the material we can buy for 1500 billion... perma. . . so we could ask the 100 million what are not going to their sponsors to further the cause of a free donation of an android talented friend to every human being if we think of 100 million androids and some perhaps 100 billion money left of the initial 2500 billion crowdfund, they could eventually start constructing a fleet of lifeships what are producing fresh vegetables and fruits to be distributed for free to anyone on the globe suffering from a vitamin defficient diet ascende... i see a plant growing ship hovering in the air beside the village and every one who wants can come to receive free food from the androids on board

2-ascende and perma both liked to draw

<https://archive.org/details/ascendeandpermabothlikedtodraw>

after their chat on the crowdfunding for androids the started drawing ascende took some inspiration from the human skelett with some additions from the animal world like fish gilles and bird wings perma added the artificial flesh with skin what had photosynthesis capabilities as well colour changing like the chameleon in their next chat ascende started wondering how psylocibin mushroom and cannabis flowers would fit into this android formed after human animal plant features perma proposed to build the cannabis flowers into the head covering hair, beard and eyelashes while the mushrooms could grow in the pits under the arms to draw the outer forms was quite easy for them perma used berries leaves and tree bark to draw either on paper or she just laid it out on the ground to send it to ascende as a photo taken with her smartphone ascende used photos from the internet what have been given for free reuse and worked with several filters and drawing on the computer and his smartphones as well as handheld game devices with homebrew drawing programs on it the second phase was more diffult and it took both of them some months untill they were starting to learn about the inner visuals of flesh and cells perma chose the meditating way to see before her inner eye how the different microscopic pictures ascende sent her could be visualized into a collage a photo of a human skin cell melange with plant photosyntesis hull cells and magnifications of the chameleons skin when ascende saw this drawings from perma showing her design what possibly a mix of several types osf skin cells could look like ascende decided that he would try to do some biological petri dish experiments using some own body cells and some plant tissue while leaving out the chameleon as he did not want to disturb a wild living chameleon he

was a vegan at this time and did not want any animal being captured, bred in captivity or hunted... he needed half a year to learn the techniques of biohacking ... when he finally was successful in creating a mix between human cells and plant photosynthesis tissue perma saw in his microscope photos some structures she had drawn making her think of how possibly a wild living creature would want to contribute living cells to build the biological life tissue for an android where she lived in the tropics she could easily go to a place where chameleons were there she meditated on her own drawings as well as on the photos ascende sent from his petridishes and one chameleon came to sit in her lap rubbing his body at her clothes while she was staying still passively when the chameleon went away, she carefully took the skin cells what the chameleon left on her skirt and bagged it to send it quickly to ascende he was so happy to hear perma telling him how she was so nicely donated with the living tissue he quickly studied in the internet how he could keep this chameleon skin cells alive and managed it in a special petridish when perma heard this, she proposed to come to paris where ascende had his flat he had bought himself when he got donated 2 million ,€-£\$ from an art connoisseur who this way showed his appreciation for ascendes dance videos, novels and drawings he had produced during the last 15 years the art sponsor did not buy any rights or something, he was just happy to have found ascendes collection on an internet archive server these days he was eagerly following the work of ascende and perma ascende had built an online presence where he posted all their drawings and chat protocols regarding the android crowdfunding project with a forum where people could comment on each photo and videos of the living cell mixes or on the chat text or the phone audio files between ascende and perma when perma arrived in paris and came to ascendes flat where he had installed all kinds of aeroponics and hydroponic plant growing some of his food also cannabis plants were coming well within his flat mushroom chambers and microalga bioreactors completed the rooms where the petri dishes of the android skin cell growing project took place as perma saw this, she said... this looks to me as if our android talents are being designed in nearly this setting where we wish them to build it inside the lifeships ascende... basically you are right on that while i have not yet consciously thought of the exact positions of what type of growing process regarding to the other processes perma... how about we install video cameras here so we can show the people what follow our project 24 hours what happens in the petri dishes bioreactors fungus rooms aeroponics ascende ... this way the consciousness of the supporters too can help to direct attention and mental life force towards the processes we collectively wish to help give birth too perma.. like i did with my meditation sitting at the place where chameleons live, the supporters can fill their computer screens, smartphones etc with a mix from live petri dish video feeds, our drawings ... and if they feel inspired to it, add their own sketches drawings both in a window javabox on their own screen... so they meditate design cocreate while part of their eye rests on the live petridishes ascende... where we hope we will find a lasting life sustaining cycle engaging itself so we ideally can continuously work with the same cell tissue donated by the chameleons, me and some stuff i took from plants perma... you took it in a gently way ? ascende ... i tried, but i guess my relationship to plants in general is not as tender as

it could be... i managed to eat less food and chew each bite till it is fluid in my mouth... but i still eat perhaps double the amount what i think would be necessary at my stage of mental evolution perma... perhaps we can learn here together, i too would like to intensify my gratitude to the plants what offer their life force to give me pleasure nurture and reconnection to the cosmic love ascende... my flat is big enough , i am very happy with you staying as long you dont miss your permaculture hut in the tropics perma... mmmhh ... i miss it already but i see with our project that we have here a strong chance to keep this chameleon donated cells alive , i think i would like to contribute my own body cells, eventually our bodies having met when i was at the chameleons living place to meditate... perhaps there is a chance of our souls helping us to carry the meeting energy from the tropics to pahs ascende.... brilliant, i like this ... and if the cell culture mix of yours with chameleon and mine with plant tissue... are both stable for a week or so ... perma jumping in... we pack them in and bring them to my tropic hut where we set up shop, transmitting data to the net via satellite dish so they researched learned from each other, the petri dishes, the supporters what were now quite a few, while some of them botanists microbiologists biohackers etc some people asked when ascende and perma would start the crowdfunding that was a difficult question... at what stage would it be wise to start the end phase with a time schedule till the androids could be delivered basically, the crowdfunding for the production could start at that moment when all of the necessary biologic process were researched and a prototype was functioning or ... more possibly., the actual growing of the prototype would perhaps need a separate crowdfunding, as the growing of bones and muscles connected to computer brains ... it all being complex as anything and needing eventually itself 5 billion,€-£\$... this then a research crowdfunding ... aiming at the 500 million people ascende and perma guessed could afford to pledge 4600 ,€-£\$ within one year for a working android talent friend these 500 million people could donate 10 ,€-£\$ to get the 5 billion together eventually needed to complete the research within 5 years

3-bio experimenting with petri dishes and bioreactors

<https://archive.org/details/bioexperimentingwithpetridishesandbioreactors>

bio experimenting with petri dishes and bioreactors ascende used one of this kits one could print out from the internet he created for himself a novel input and display solution at his hands and all his joints on his body he had tiny soft textile bands weighing only 3 grams each into these bands were the sensors woven into what would allow the central data processing unit to know the exact position of all moving parts of the body

he had also a full body suit wearing about 200 gramms what allowed himself to see his muscles and flesh in realtime the compter being woven into a poach one could wear anywhere on ones body with some small lightweight straps... as the computing unit itself was the size of a small flat matchbox or a watch for example. . . on his head he wore glasses what have been available since some times with them he made photographies and movies on all the experiments petri dishes bioreactor algae growing also sometimes he took a glass filled with water to see trough it.... in order to inform this water in his glass what he was experiencing happening in his laboratory or their lab as perma too was now part of his life not long after perma moved in with ascende in paris to make sure he would not waste the chameleon dna she so preciously got donated when she meditated at the chamaeleon forest not long and they were a romantically sexually active couple she took him right into her mouth and sucked his sperm off to digest . . . and he was worshipping her vulva ascende used one of this kits one could print out from the internet he created for himself a novel input and display solution at his hands and all his joints on his body he had tiny soft textile bands weighing only 3 gramms each into these bands were the sensors woven into what would allow the central data processing unit to know the exact position of all moving parts of the body he had also a full body suit wearing about 200 gramms what allowed himself to see his muscles and flesh in realtime the compter being woven into a poach one could wear anywhere on ones body with some small lightweight straps... as the computing unit itself was the size of a small flat matchbox or a watch for example. . . on his head he wore glasses what have been available since some times with them he made photographies and movies on all the experiments petri dishes bioreactor algae growing also sometimes he took a glass filled with water to see trough it.... in order to inform this water in his glass what he was experiencing happening in his laboratory or their lab as perma too was now part of his life not long after perma moved in with ascende in paris to make sure he would not waste the chameleon dna she so preciously got donated when she meditated at the chamaeleon forest not long and they were a romantically sexually active couple she took him right into her mouth and sucked his sperm off to digest . . . and he was worshipping her vulva with his broad tongue, flapping her clitoris to make her squirt in his mouth oh that was unintended kind of spontaneous erotic phrase.... to continue watching ascende and perma getting more and more into synchronistic and love filled flow. . . it took some days of them spreading to love in the appartement while the skin cells of perma and the chameleon would grow into each other but it was done now there were bioreactors carrying humanplant cells from ascendes line of experiments and others carrying the perma and chameleon fusionated cells 2 weeks passed while they both were happy with each other and tending to the petridishes bioreactors watching and nurturing their co-creations they both were humble enough to acknowledge the whole creation and all of its creators or the one... to be the giving entity of the life force what fuelled the experiments success this was not their property although the source has allowed the person to have a say with how the genes are being handled 30 minutes later a has washed himself in the wild river, danced in the little sandpatches laid himself again on the stones where he saw in his mind how

the human and plant cells grow together drawing it rudimentarily a walks home towards when he thinks about how could there be a link of the line of storytelling where they grew it into their very own bodies at the pools would it be acceptable for the reader to have ascende and perma bathing themselves with their cell creations ? a tends towards yes, as it might be an important research field ... the human and animal cells were fusing together nicely and were multiplying strongly perma made herself a bath with where she enjoyed beautiful visualisations of molecular and microscopic levels how the new kind of cells were adding itself to her own skin she only used a patch the size of a fingernail the ability to see the synthesis of this tiny bit of new cells with her skin... came through her studying the microscope and smoking ganja with ascende with also eating psilocybin mushrooms from the darkchambers in ascende s appartement in paris she had been eating psylos and eating as well as smoking marihuana also in her tropical permaculture hut when she left the bathroom still baffled by the dreamlike insights she just got donated with she told ascende about her success listening to it, ascende wanted to try it to with his co-creation of human and plant skin functions... and also him got the vision donated when he saw the 2cm² of new cells being fused into his body happy on that success they went to bed to celebrate their reunions with the new cells the next morning ascende saw a perma what skin has blended in smoothly with the white of the cushions and the windowsheets while himself noticing a warm nurturing sensation when he opens the curtains to let sunshine on his skin so... miraculously the properties of the new cells have speed delivered their capabilities to the old cells of the whole human body an x-fold magnification of skin regrowing changing times

4-staying home trying out the new features

<https://archive.org/details/bioexperimentingwithpetridishesandbioreactors>

bio experimenting with petri dishes and bioreactors ascende used one of this kits one could print out from the internet he created for himself a novel input and display solution at his hands and all his joints on his body he had tiny soft textile bands weighing only 3 grams each into these bands were the sensors woven into what would allow the central data processing unit to know the exact position of all moving parts of the body he had also a full body suit wearing about 200 grams what allowed himself to see his muscles and flesh in realtime the computer being woven into a pouch one could wear anywhere on ones body with some small lightweight straps... as the computing unit itself was the size of a small flat matchbox or a watch for example. . . on his head he wore glasses what have been available since some times with them he made photographs and movies

on all the experiments petri dishes bioreactor algae growing also sometimes he took a glass filled with water to see through it.... in order to inform this water in his glass what he was experiencing happening in his laboratory or their lab as perma too was now part of his life not long after perma moved in with ascende in paris to make sure he would not waste the chameleon dna she so preciously got donated when she meditated at the chameleone forest not long and they were a romantically sexually active couple she took him right into her mouth and sucked his sperm off to digest . . . and he was worshipping her vulva ascende used one of these kits one could print out from the internet he created for himself a novel input and display solution at his hands and all his joints on his body he had tiny soft textile bands weighing only 3 grams each into these bands were the sensors woven into what would allow the central data processing unit to know the exact position of all moving parts of the body he had also a full body suit wearing about 200 grams what allowed himself to see his muscles and flesh in realtime the computer being woven into a pouch one could wear anywhere on one's body with some small lightweight straps... as the computing unit itself was the size of a small flat matchbox or a watch for example. . . on his head he wore glasses what have been available since some times with them he made photographs and movies on all the experiments petri dishes bioreactor algae growing also sometimes he took a glass filled with water to see through it.... in order to inform this water in his glass what he was experiencing happening in his laboratory or their lab as perma too was now part of his life not long after perma moved in with ascende in paris to make sure he would not waste the chameleon dna she so preciously got donated when she meditated at the chameleone forest not long and they were a romantically sexually active couple she took him right into her mouth and sucked his sperm off to digest . . . and he was worshipping her vulva with his broad tongue, flapping her clitoris to make her squirt in his mouth oh that was unintended kind of spontaneous erotic phrase.... to continue watching ascende and perma getting more and more into synchronistic and love filled flow. . . it took some days of them spreading to love in the appartement while the skin cells of perma and the chameleon would grow into each other but it was done now there were bioreactors carrying human plant cells from ascende's line of experiments and others carrying the perma and chameleon fused cells 2 weeks passed while they both were happy with each other and tending to the petri dishes bioreactors watching and nurturing their co-creations they both were humble enough to acknowledge the whole creation and all of its creators or the one... to be the giving entity of the life force what fuelled the experiments success this was not their property although the source has allowed the person to have a say with how the genes are being handled 30 minutes later a has washed himself in the wild river, danced in the little sandpatches laid himself again on the stones where he saw in his mind how the human and plant cells grow together drawing it rudimentarily a walk home towards when he thinks about how could there be a link of the line of storytelling where they grew it into their very own bodies at the pools would it be acceptable for the reader to have ascende and perma bathing themselves with their cell creations ? a tends towards yes, as it might be an important research field ... the human and animal cells were fusing

together nicely and were multiplying strongly perma made herself a bath with where she enjoyed beautiful visualisations of molecular and microscopic levels how the new kind of cells were adding itself to her own skin she only used a patch the size of a fingernail the ability to see the synthesis of this tiny bit of new cells with her skin... came through her studying the microscope and smoking ganja with ascende with also eating psilocybin mushrooms from the darkchambers in ascende's appartement in paris she had been eating psylos and eating as well as smoking marihuana also in her tropical permaculture hut when she left the bathroom still baffled by the dreamlike insights she just got donated with she told ascende about her success listening to it, ascende wanted to try it to with his co-creation of human and plant skin functions... and also him got the vision donated when he saw the 2cm² of new cells being fused into his body happy on that success they went to bed to celebrate their reunions with the new cells the next morning ascende saw a perma what skin has blended in smoothly with the white of the cushions and the windowsheets while himself noticing a warm nurturing sensation when he opens the curtains to let sunshine on his skin so... miraculously the properties of the new cells have speed delivered their capabilities to the old cells of the whole human body an x-fold magnification of skin regrowing changing times

5-ascende was ready for to go online in all of the rooms in his parisienne appartement

ascende was ready for to go online in all of the rooms in his parisienne appartementso was permathey considered it not as exhibitionism but as a contribution to helping the human evolutionevolution in the sense of a being discovering the potential what lays in its genes plus to mix ones genes with other species to enhance ones own genetic treasurea treasure what only grows with sharingthe afternoon before the going live morningthey went out into the parcs of paris to see how their skins would act and react being surrounded by trees and grass other people ...they both dressed lightly to expose their skin to the sun and the flowing airascende lay down on the grass as soon he got into the parc, he loved it so much to feel the grass holmes touching his belly and back, his armsit smelled of good soil and lifeperma did dance she moved using all kinds of animal typical turnsand watched her mind as when the urge to skin colour change would arrive as she let go of some logical mental dominance and give the emotions some free space in her aurathe people passing by did not especially react to the two, as it is quite usual for city parcs these days to have people enjoying laying themselves onto the grass, dance, sing or play instrumentsperma felt the feeling to mask at times when some grumpy ones or ones with anger were running around or walking their stuff offbut then she kicked in with her compassion for all fellow beings, all my relativesand the urge to hide gave way to more embracing and integrating emotionsit also

changing her dance, depending on how she got watched ascende loved dancing too, and he stood up from the grass to also move himself with singing in a low volume to himself occasionally they met each other on the middle of the grass patch they made their playground but they were not so much looking to dance together but explore their ways beside each other faintly feeling knowing the partners presence but still giving each other the free space so each one could find its own accordance of feelings body sensations and thoughts in moving although the appartement of ascende was with 300 sm² spacious enough for them both ... one high room with some curtains being installed to separate some spaces like bathroom they could not dance the same way as in the parc the flow of air in 40 meters height was different its particles it brought with the scent the sunlight only entering through the windows at the side and on the roof the missing grass although ascende managed to let the appartement be rebuilt according to his love for the outdoors it came short of being the outdoors quite a bit but still when they returned from the parc, having eaten some bananas and avocados, nuts and berries the bought in an organic shop on the way home... they felt in the mood to dance in the middle of the appartement where about 150m² was empty, all the experiments, bioreactors, funghi grow chambers, aeroponic, tables with petri dishes, computers and more were near the walls as there were no plants trees to dance with except the ones in pots and chambers they took each other as the dance partners, it soon turning into kuschelrock slow dance fumbling erotically aroused desire to taste each others juices in the middle of this night at around 1 o'clock ascende woke up to drink some water as he felt his mouth dry from smoking ganja this evening perma preferred to eat the dried cannabis flowers with some nuts and seeds together chewing it 300 times at least so she could journey discover in her mouth all the flavour and signals to her synapses she got from the nutty oily rich juice she chewed it into but she also was overdoing it like ascende this evening, being a bit nervous for tomorrow morning so they both drank some water what ascende has specially constructed an apparatus for on the top was a vessel with rocks, then below it a vessel with smaller rocks, with several following below gradually their size getting smaller until it is sand through all the vessels the water poured into the top vessel can pass through holes in the bottom to arrive in the collection chamber then vessels being made from burnt clay from the collection vessel it got again flowing down through some artistically spiritually channeled flow forming schalen where it gets some sort of natural movement sometimes ascende found himself collecting the water with his hands forming a cup like and ascend the stairs to pour it onto the top rocks, being an exercise of both attention not to lose a drop to the floor and admiring giving thanks to the being of water what allowed his system to interact with the surrounding environment about once a day he took about 5 10 liter buckets full of water up the small stair to pour it onto the rocks when they were drinking beside each other, looking at each other with amour and appreciation how they learnt to understand their inner connection to similar visions and soul aims... washing each others faces with water and kisses... ascende asked perma how long she thought they should stay in paris he was kind of longing for greater outdoor times with wild places, when perma meant ... anytime from now we can go to my place in the sub

tropical area she had built her permahut with gardenmmmh, ascende optimistically sounded, i could find someone to look after the hydroponics aeroponics and all the other alive things herewith only taking with the petri dishes what we could culture further at your placeperma... or we too leave them here someone from our supporters experimenting with them eventually...ascende was interested too getting away from petri dish cages and bioreactors, all kind of encaging plants felt kind of less than idealshim having read about the gardens of permaculturists what after several decades of tuning working the garden had found a self sustaining cultivated wild cycle with the only thing left to do for the human host or guest or patient... the receiving party... only thing left to do being to harvest the fruits when ripeof course he wanted to continue with the research in the laboratory to create all the most marvellous semi-artificial or let us say manipulated cell tissue to cloth the androids inbut there would be others being so happy for three months staying and researching at his place, eventually they too would go the bio cell fusion way enhancing themselves or they would stay more focussed on the advancements in the petri dishes, bringing in live cell printers and so onyes, perma agreed, it might actually be for the best for the research phase before the crowdfunding to get a couple of other dedicated enthusiasts in the teamand we two can follow our dream of on and in and in between sensual bodies growing.... touching lustfully each others already cellfused skins, getting into near encounters with wild animals and plants

6-they chatted a while at the water place

they chatted awhile like this at the waterplace when perma said,mmmh, although i feel we should give others a chance to experiment here in your appartement, we can still from time to time contribute some photos text and videos from our tropical placewith ascende saying... i noticed you said our hut meaning your permaplace and your appartement meaning here, shows me something on my still patriarchic behaviour in our enterpriseoh that is okay, i do not care exactly who thinks what would belong to him or her , perma answered ascendes reflectionbut yes, that is a good place to research the psychic constellation of the participants regarding who will be able to call this or that success in biological cell manipulation evolvementhis or her propertyfrankly, ascende said, i think we shall open source all of it, everyone welcome to use our stuff how it fits themperma... we just hope that they will use it in a benwvolent avenue what would help humanity to work less and enjoy playing moreascende... i think the key element of our findings are we ourselves, like our skin we are wearing right now... we

could try to explain about the gentleness involved when cell samples being collected perma.... and highlight the fusioning approach without any other heat than the ones from our bodies, there was no cutting and pasting involved no dna extraction processes, just our love towards the living cells in the petri dishes ascende... us wishing for them to grow together and become a higher class then when single perma... i do not know if it is higher but the capability of our skins now are broader and deeper filled with knowledge they sat silent after that for about half an hour when they lay down together holding each other softly about 5 hours later they woke up enjoyed some of the aeroponic and hydroponically grown strawberries with a juice of fresh spirulina microalgae water from the bioreactor they wandered around in the appartement spoke with the plants lauded them how well they have developed and gave thanks for their contributions them serving the humans in this less then ideal conditions perma felt well what was missing, the greater connecting wind what brought informations from far away place the air in paris was better these days in 2020 when most of the cars were electric populsed and much of the producing workshops used hydrogen fuel cells but there was a kind of dividing effect going on with the air flowing in and out of millions of houses loosing on the way its wild informations and instead being informed with the doings of humans ascende looked at it same but different the loved the wild but still thought that it is well for the people living in the city to eat food grown near to them perma too was understanding how this planet can host as many billion human beings as it eventually would need for this race to finally understand that they us do not own this place because the more humans get born the more important will it be to use the space already concreted made into roads etc in the most efficient way so they were thinking to themselves wandering around in the appartement getting ready for today 10 o'clock when they would set the cameras in their living places on.... like ... their bed, their bathroom.... so they both stayed naked at ten ascende laid on the balcony enjoying the early sun and perma standing at an empty wall where they extra put a camera up she started to talk about how they have met in the net she getting presented with the chameleon cells and her still wondering how ascende got his plant life cell samples at this moment the people watching the appartement as part of their daily holydays like sightings of plants and cell evolutions in the petri dishes they all were equipped with cameras ... the people started to realize what happened with her talking of chameleon cells and slowly dressing herself with her skin becoming pinkish with each piece of clothes she put on at first they were writing cheering texts in the chat when after perma reacted to them thanking for the cheers and enthusiastic feedbacks some of the more serious into cell research were asking questions like... how the heavens did you apply the chameleon intelligence to your skin... perma explained then how they both bathed with some tiny bits of successfully lab petri dish fusioned interspecies cells ascende too ? someone asked with another person did remark that is why he is laying there naked on his back on the balcony ... to soak up the sun with his photosynthetic enabled new skin perma was reading the text out loud to ascende adding, that might be your moment now to announce... no , do not spill it my dear companion ... ascende laughingly cried out, jumping up on the balcony to adress the

audience at this point the reader would eventually be delighted to hear the unveiling of the story how he got his plant live cells but the author here has just not figured it out yet ... or... have I forgotten it, was I not writing something of a plant part being trampled off by animals... yes ... but it is not as gentle as the meditation experience what brought live chameleon skin cells to permaso... that is what ascende said now.... I am so sorry but I can not tell you such a mild tale like perma ... my one involves just walking around in the nature the wetlands and forests botanical gardens and parks of Paris looking for plant parts what just most recently have been separated from their plants.... and one of the perhaps 10 samples made it to fusion with my donated cells perma coming out onto the balcony and joining ascende looking in the camera she said, here we probably have not too much of a reflective method, like ... we did watch the cells fusing into each other but did not make notes... when ascende was reading on his smartphone screen incoming messages like.... never mind, just tell us at what date and time you have taken samples of what petri dishes and we eventually see on the microscopic camera recordings what happened there between human and animal or human and plant cells ascende now being relieved.... I am so happy about that approach, thank you for taking up the more logical side of research.... that is where I actually would like to announce perma and me taking some field trip time into the wild perma supportively... like we will stay around three months and for this time there is a free space here for some adventuring cell biology researchers.... when the texts coming in were already having three people wanting to be there...

7-sharing frenzy

so this was done then the two thought at the time when the first three interested announced themselves ascende said... hey folks , that is amazing perma reaffirming, ya we are so ready to leave into the wild, thank you for continuing here the experiments ascende... you probably will invent new ways too to advance cell evolutions now the three were asking all kind of questions like ... when can we come ... with ascende saying as soon as you can, I can barely wait to feel subtropic sun on my body, it will be like having dessert to every meal perma said , do not worry about the money, we have a steady inflow of donations now as for the research part of the android crowdfunding 5 year project the three, Nilani, Mandu and Luoma were living already together in Sao Paulo in a sharing loving way so they were already at a heightened group understanding since about two weeks they were donating some hundreds toward ascende and perma movie live streaming from their appartement they were themselves owner of a house in Sao Paulo and had good friends what would look after it eventually they could install some petri dishes cameras and fellow cell evolution searchers there wonderful idea, ascende commented on their introduction I bought this flat

for a million with 2 millions i got donated from an admirer of my art as of today i donate this flat onto the group effort with us being 5 now who have an equal share on both the flat as well as with all what is in it perma agreed and added, all our findings go to the public domain anyway, and shall be used for the good of this planet... but there is all the installations in here what ascende probably spent another 200 thousand for ascende ... and i have an account with around 300 thousands on what is solely dedicated to pay fees the city asks like property tax, water, electricity etc.... nilani ... oh i do think we will buy some solar panels with our own money when we move in luoma... and this water recycling system of yours looks quite sophisticated from what i see from the cameras you set online this morning, i have some ideas how i could enhance on it mandu... but yes, i understand your bold investment into the android project, it will greatly bring firmness into the projects perception perma... you ascende saying that all who live in an appartement or house connected to the cell evolution research for android for all crowdfunding ... all involved persons will have an equal property share on all the material belongings to the project ascende... yes, like, we two agree that we want to share it with nilani, mundu and luoma, if they for example donate their house to the pool too and have friends who want to do similar research at the sao paulo house too, we five would have to agree on accepting the new ones perma... i like this, i will also chip in with the perma place i built myself on the canary islands i bought that for 30 thousands what i got donated from my parents for my 21 birthday mundu... what you say nilani and luoma, shall we make the commitment too ? nilani... how trustfull of ascende to know us with videochat some hours and share his one million appartement property with us perma... we both did share it with you three as ascende has donated me half of his before and i have shared mine with him completly ascende... yes, i probably forgot to tell you, kind of probably patriarchic crum in my brain thinking of my one million investment against your 30 thousand, stupid, i am sorry perma... not that problematic, please do not worry about it, i believe you are growing strong on the gender neutral avenue luoma... i want to give my third of our house nilani... me too mundu... so it shall be fantastic, perma said, look at us ...5 people having three places and sharing it completly luoma... as i look at it, there is now space for 12 people, making 7 places free now ascende... i believe more... with here well 7 people to the max mundu ...and at our place max 5 as the house is about 200 m2.... perma...with at the permahut probably four to five depending on how near to each other we can live on 30square meters ----- continuing text 7 on a piece of paper with pen ---- nilani,Ä¶ and you know what ? as my very personal contribution i will donate myself a shorter name,Ä¶ nila ,Ä¶ i am mundu,Ä¶ well well that is a line of thinking ,Ä¶ luoma,Ä¶ nila,Ä¶ lovely nila,Ä¶ thank you, i was considering to change my name for a while now and it feels very good to do it now when we are in this sharing frenzy ascende laughing,Ä¶ frenzy as when one is excited about tasty food and gobbels it all down as it were the first and last meal one would have ? that how you mean ? nila,Ä¶ exactly,Ä¶ but i think it is a whollistic frenzy, sustainable and,Ä¶ by the good spirit,Ä¶the world can certainly digest some sharing frenzy as with our history the last several thousands of years of

stealing of each other or excluding a part of the population from the collectively amassed wealth

8-nila, mundu and luoma

nila, mundu and luoma were familiar with being in circles where sharing did heighten the group members consciousness there is a worldwide organisation who redistribute funds coming from colonization times... like... descendants of colonising ancestors are very happy to give part of their inheritance to the organisation what then buys houses, finds homeless or very poor persons whom the houses can be given to that is how nila, mundu and luoma got their 200m² house in sao paulo as they experienced poverty for the first fifteen years of their lives, they felt in good agreement with the android robot companion for everyone campaign it was exciting to imagine all their friends who had to do the not really nice jobs in the rich peoples houses... one day taking their androids with to work and instruct them to do the jobs as they were giving insights about their lives to ascende and perma, an idea was forming in ascende's mind he said... what do you think of the sharing of houses like we just did now ... as an independent model, independent from the android crowdfunding goal... luoma answered... i find that a good idea, as the ability to travel all the world and stay for free at the houses what are given into the pool... can be motivating for the people who not particularly see the necessity or benefits for society with an android help for everyone nila... we might even combine the two approaches with for example one or more androids in the houses what can do the repair and maintenance works if the temporary visitors agree with it if they rather to prefer to live without machines while staying, the tasks can be done when they moved out onto the next house perma... of course they can also do something themselves if they feel capable of performing as well as the androids mundu... with it not being a matter of concurrence or competition but one of choice ascende... this way also dance companies or artist colonies could join the sharing movement they continued chatting awhile about the possible synergies of the two concepts when nila said... hey, i just saw on the net a flight from sao paulo tomorrow morning... mundu... let us book it luoma... but do we have the money to pay for it? ascende... i would very much like to come up with the needed sum, let me know your account details and i send it to you electronically this evening nila... how generous of you again, we are looking forward to see you soon then in paris they said goodbye to each other wearing happy smiles ascende and perma were very satisfied with the events and plans initiated today they made their round to look and greet the experimental cell cultures aero-, hydroponic plants, bioreactors and funghi chambers, snacking here and there with giving thanks soon they were well nourished and met at the water place to silently sit there to watch the drops coming forming below the sand filter

9-explicitly sexual the welcome party in paris

explicitly sexual the welcome party in paris they landed in paris the following evening on board of the aeroplane they followed ascende and perma via internet on their rounds to talk cuddle and eat their indoor garden fruits also the cell cultures were developing further, the petri dishes streaming video to the net ascende was thinking whether they should stay some days more after nila, mundu and luoma arrived perma too was thinking along these lines and said aloud... we could eventually have some good fun here as five cell evolutionary experimenters i wonder whether they too will be sensual dancingly swinging feeling or if their approach will be a more logical rational one ascende... from what i understand from them chatting with us, they are strong in both areas, rational and sensual emotional plus they have south american sense of partying what sure i admire, in the sense of being filled with joy from moving in rhythm i find myself often singing humming to myself soothing lullaby slow tunes perma... you are right, that might bring some new dynamic into our space ascende... possible that the cell cultures as well as all the plants and microalgae might profit greatly from this life energy in rhythm perma... so we stay some time, if that is okay with the three, like ... we told them we are going to leave as soon as they arrive ascende... good input, they might eventually want to continue with their threesome energies... or they might be happy sharing our both group auras not long after they had exchanged like that the three were here and hugged ascende and perma warmly they were hungry so all five went together to tour the appartements for tiny strawberrie and tomatoes on the aeroponics mundu was enjoying a handful of spirulina microalgae and urged luoma and nila to have one too ascende and perma were bathing in the auras of the three excited ones occasionally they were dropping an information here or there about the growth cycles of this or that experiments but most of the times they were studying their new partners in this research and development enterprise once the three were satisfied nutrition wise they turned their interest towards ascende and perma, asking questions ... nila wanted to know how it felt when in the bath their skin cells merged, with both ascende and perma describing it as a constant being blessed with warmth and richly nurturing one luoma was listening to them and approached ascende, fumbling at his pants, pulling them down quickly while going down on him to suck his penis with moaning sounds she wanted to have his semen at this moment he talked about the cell merging ascende looked at perma if she would allow it and found her looking at him with a loving smile then she turned around to give mundu a kiss on his mouth what was still green with microalgae juice he too got horny and not long he was having a huge hard what perma and nila now both did comfort with their dripping vulvas alternately mundu ejaculated in nila as they were very known to each other with ascende emptying himself in the receptive awaiting

longing for luomashe drank him with satisfaction ascende then was so vibrantly charged from luomas admiration that he went onto perma with strong vigourshe came quickly on his strung pumpings and he wetted her with his essence, what she took in and built it in herwhen luoma and nila were licking each other toungeing their labias and anal openings, climaxing and squirting all over the placenow lying alltogether in a cuddlepuddle of squirt rubbing each other with it and starting again and again to draw each others ecstatic fluids out to devour them researching taste and consistency of semen and female ejaculate ... a feast of lovethey slept after that many good hours, just there by the water recycling installation... with luoma waking up in the middle of the night to have a peewhere would be the toilet she asked herself, thinking then, how about i use the water bucket ascende uses for carrying up the water to be filtered... and give my pee also in this cycle... as our loving togetherness last evening has surely made us appreciating each others juicesso she peed in the bucket and did pour it over the sandwhen perma woke up seeing her doing itmmh, why have ascende and me not thought about that, it is flowing already most wonderfully with the threes, them doing already their own thing enhancing the completion of the information digestion cycleascende too was awake now having seen luoma, she smiling at him, taking a handfull pee out of the bucket and drinking it half, offering ascende somehe was looking at perma who was nodding at him encouragingly while herself feeling the urge to let go of urinewhat she did standing over the kneeling ascendewashing his head with her urinewith the urine now spraying mundu and nila they awoke to join in the pee party, pissing in each others mouth with love and appreciation in their eyesthe place now slippery wet and smelling strongly of micralgae and fruits as well as cannabis and mushrooms what they ate the evening beforetheir clothing was by now removed and served to soak up the urinewhen they had drunk each others urine their sex drive got awake again and another round of penetrations suckings lickings let the five roar cry shout out loud the place with ecstatic feeling expressionsascende and mundu also tried each others semen while sucking each other off in 69 positionwhen everyone had orgasmicated, they put all their clothes what were soaked with urine and all kinds of fluids released in the sexy intercourses... in the bathtube what actually was quite big allowing easily three to lie beside with eventually three on topascende and perma looked at each other and were thinking the same... what luoma and nila spoke out loud... hey... how about we having a bath all together now with some samples of the cell cultures...as we know you now with your semen, permas female ejaculations and your both urine, we might eventually find your evolved skin cells being congruent with ours...mundu did not bath with as he wanted to research the skin cell evolution separatly with his own cells in a petri dishso the four of them did take the bath with some tiny bits of petri dish cells of ascende/plantand perma/animalfor about an hour did they lay beside and on top of each other without moving much, stroking each other tenderly and occasionally kiss each other full of thanking and appreciative spiritnila and luoma were not quite seeing the same innerpictures as they did not have so much training on that as well were not consuming thc/psilocibin that intense as ascende and perma did since in the appartementperma at her

permaplace was also eating mushrooms and cannabis, but not that much as herewhen they left the bath to go to sleep on the beds ascende and perma had prepared while their flight from sao paulo to paris... it was not quite clear what the effect of the bathing was, if their cells had merged or not... we will see in some hours when we wake up perma whispered to ascende with a motherly smile in any way, this feast of love and appreciation we enjoyed this night were such a great present to me ascende hugging her and saying ... we are so very lucky, thank you all what is for this harmony-----nila, mundu and luoma are 25 years old with ascende and perma 55-----mundu had been studying the petri dish film recordings of the last two and half weeks since perma was in paris, while the four had bathed with some petri dish cell sampleshe began to see the patterns of how the cells did grow together to merge their characteristicswhile the four slept happily after their bathhe put on some microscop lens glasses with camera to record what is happening on nila and luomas skin cells after being so lovingly impregnated by ascende and permas dna through semen, female ejaculate,urine and bathed with the petri dish grown cellshe was not surprised seeing the same merging patterns and congratulated himself as not having participated at the bathinghe believed that the sexy exchange of dna was still a strong influence, he found both permas juices as well as ascendes semen of pleasure inducing tastebut he would want to find his own plant and animal cells donation either here in paris or eventually at another place where he could travel too as the network of houses probably will grow one people have watched the recordings of our chats and love orgies here in the parisian appartementhe might even try to build his own place similar to the one perma built, a place where he could meet animals in the wild not far from the hut he would livehe thought to himself while recoding nila and luomas microscopic skin evolution... i could invite some dance jamming sounding harmonysearchers from hawaii to live with me and we could find each our own power animal connection and wisdom plant marriagei am sure that miema and maru would be gay for itmmmmh... but how about nila and luoma here in paris on their own... they might invite some of our friends from sao paulo as to give this parisian appartement a proper juice up on rhythms and pulsations of libido and life joywhile he is filming and thinking like this, nila wakes up and he tells her about his hawaii planshe thinks it is great and names 5 of their friends in sao paulo she thinks would the place here and be too happy to evolve in such a fuckingly sweet settingwhen luoma also wakes up and asks mundu whether he would come back to paris to merge with the found animal and plant donations he would eventually find in hawaimundu.. i am not sure, i might perhaps set up a little petri dish lab there... actually, that could be an ideal expansion scheme...some stay here in the lab and evolve the fuckingway and bath in others petri dish cell cultivations while some do go out in wild places to set up a simple nature respecting outpost where the direct contact with wild nature is of greater focus...luoma saying... and there can be licking sucking fucking too in the wild... with nila moaning.. getting me horny again my tasty sister... i am gone stick my tongue right up your but in a minute...mundu...and i will feed your mouth with my hard one,luoma...ahhyes you two beloved ones, take me again i am ready right nowascende and perma were kind of half awake hearing their conversations and lovemakingthey held

each other and smiled knowing that their choice of sharing with the three was a good one

10-they slept through into early afternoon

they slept through to early afternoon it was no big surprise seeing nila and luoma having successfully integrated the features of perma and ascende's new skin they were chasing each other through the appartement playing with their new chamaeleon style blending in features mundu did not change as he for one did not bath with the petri dish cell samples and second did not yet want to change he wanted to have his very own gentle meeting with wild plants and animals when he told ascende who was laying himself onto the balcony to breakfast some afternoon sun rays about his plan to move to hawaii and setup a similar hut like perma had in the canaries (here the author would like to confess a possible incongruency in the story... are there chamaeleons on the canaries ... perhaps not native... but eventually some people brought them in from the tropics to set them free here ...) ascende was very interested in this approach, he saw the benefits for the research project when more and more individualists like mundu went to new wild places to receive all kinds of new samples, possibly find new ways of merging human and animal and plant cells, ways probably not yet known to science... that would make a wide base on what others here in the parisian appartement could build up on perma was now also photosynthetically enabled, as she too bathed last night with ascende/plant cell culture so the four of them only ate minute amounts of the aeroponically grown fruit in the appartement leaving it all to mundu who was now the only one of the five unchanged the three girls joined into the conversation when ascende was talking to mundu how they would finance the continuous setup of outposts in wild spaces everywhere on the planet ascende... there is still around a half a million left of the money an art connoisseur donated me 3 years ago i could set for example 200 thousands to this purpose perma... we could buy in one act some good sized areas of the amazon, the congo and the sumatran rain forests ... beside a small patch of wild space in hawaii for you mundu... and the ownership of the rain forest spaces we would share with the native tribes there nila... if they agree with our goal to create millions of more than human like androids ... luoma... if we explain them that we not plan to exploit the androids for unsustainable purposes but we would like them to be sovereign beings what we do ask the favour to help us in the transition time mundu... the transition from the everyone fights for survival in a scarcity dominated economy to a hopefully soon arriving future setting where sharing and wise recycling of the already mined ores and new nanotech materials will bring abundance to all... ascende... i have heard the argument that the native people in the rainforests do stand in the way of economical progress when resisting roadway and water dam construction of course it is for the best of the planet if they resist the destruction of

the few left primary forests... but with our research... where we are very thankfully looking to meet wild animals and plants in most pristine areas as possible building dna for the androids... there might be an immense economical value nila... i am seeing before my inner eye how a parrot in the amazon shares its dna with one of us... how precious would a feather clothed flying android be...in hard money translation...luoma... you are right, these are very good argumentswe have just discussed this morning the three of us whom we could invite to come here to spend some transforming timesperhaps we could ask our friends in sao paulo if they wanted to go to the amazon to propose this joint venturesecuring the land rights for the native tribes while granting us the right to be guests in their territoryto gently collect dna samples for our android projectnila... i know already 5 who were very interested when we told them we are leaving to paris for cell evolution researchmundu... and i have made some good contacts with some progressive thinkers in the congo bassinthey are very concerned to find possibilities to help saving the last areas of primal forests...perma... with a traveller who came once to my permahut i spoke about a tribe in sumatra what would be happy for help in securing their habitat...ascende... let us go there first before we go to the canaries...nila,you take 60 thousands to go to the amazonmundu travels to africa with 60 thousand to secure some congo rainforests before doing the research in hawaii and perma and me take another 60k to sumatraleaves 20 thousands for the traveling costsmundu... and the hawaiian place we probably could crowdfund... would give again others the possibility to join in... like ... if we need 50 000 to buy the place in hawai, everyone giving 5000 would be a co-ownerascende... with me giving the first 25 000 for the five of us being already half of the ownersmundu... but will you have enough reserves left to fund all the necessary contributions to the host cities of sao paulo, paris...ascende... i have set aside for that 300 000 already...when the rainforests parts are secured and you have the hawaiian place half way funded, i will have still a hundred thousand left what i will keep for travelling...perma... but eventually we will be able to learn cellularily from the parrots ... sample cell cultures from the amazon... and in my place in the canaries i might be able to be blessed with some spit from my dolphin friends.....luoma... so you hint at a stage of our cell evolution growth where we can shift from feathery winged to smooth swimming fin enhanced bodies at will.....mundu...if the cell samples are being given to us with no or almost none violence involvedascende... i wonder if we should keep sending some samples to paris as to have a central lab where the ones who would quickly become multicellularly enhanced...perma... yes, it will help take the load of the wild places and will speed up the funding of the android research, like we said we would need 5 millions to be ready to make a prototype...ascende... you are right, if someone who is kind of rich with 20 millions made with an internet software sell comes visiting our parisian lab and bathes in some tiny bits of 20 or so different human/ animal/plant petri dish cultivated cell samples we have helped to grow with our own cells and the ones being given to us in pleasure... the rich guy might decide 3 millions to donate to the project... luoma... i know some professional theatre travellers in many cities who would give half of their property for the ability to shapeshift their skin from wings to finsand it

was this way it went all five of them left with some money in the pockets and petri dishes cameras and satellite internet phones to their destination only luoma stayed in paris to keep up the conversation with the hundreds of new people who were now following the live streams out of the parisian appartement when nila left to sao paulo, mundu for the congo, perma and ascende towards sumatra the next morning, there were already 6 people signed up for wanting to visit luoma in her bath... partly they were sex addicts enticed by what they have seen in the last two days via the 24 hours livestreams in the night... but to some parts as they were sexually hungry they too were longing to find reconnection to their cellular completion perma and ascende... feeling a bit parently for mundu nila and luoma... had long talks with all of the six applicants and found them to be worthy of joining ... luoma... and do not worry, if i see one who wants to exploit my fun for sex or is not gently enough in the bath when growing multicellular... i will ask the men or woman out ... by softly explaining to him that the gentleness in our research is of the highest importance... nila... like last night when we pissed on each other and drunk each others urine, this was with full of admiration and appreciation for each others high degree of healthiness, i would never allow a sick person to pee on me in a dominating negative emotion... so would you never, luoma... with her saying, yes my fruity sister, we know what is healthy and what not ascende... oh perhaps you forgot... the sexual intercourse and or uptake of others peoples urine is not a requirement for the skin cell merging... perma... ascende and me have both bathed alone with the cell samples what we have cultivated the days before... mundu... exactly how i want to do it in hawaii or at least similar... nila... so you think the quality of our skin cells having merged with ascende and perma s experimental skins is lower than the one you will have when your own skin cells will merge with animal plant informations... mundu... i really do not know... but i would advise you two luoma and nila to get out somewhere in the wild too to get your direct wildness upgrade... perma... good subject, although i do not see it as a problem when one human being donates his /her cell cultivations to another human being, this are two approaches what can well be combined ... ascende... with the great question here... can someone who has merged with another persons already evolved cells ... find a next merge with animal plant directly ... luoma... i actually do not see a reason against it, look, when i heard you speaking about how you bathed in your cell cultivations there was this urge in me to devour your semen right while you was talking about the merge... this semen given i that moment was probably helping my organism in the bath with your petri dish cell samples to accept them, likewise with perma's ejaculations i licked up in our little orgy we enjoyed last night, please understand me right, i do not plan to entertain sex driven ones ... but if they are gently and well behaved i might teach them to use their sexual drive for their and our goal of personal spiritual as well as body material growth... ascende... we believe you will well master the task to spend time with healthy minded individuals while we are travelling... perma... when you luoma just now talked about the urine exchange happening in an appreciative way i had to think about a documentary i saw on tv recently where a researcher talked about how like a perfume he found tigers markings to smell to him... although the marker

fluids are not urine they are probably similar as with our female ejaculations what are not urine but share some chemical components...nila... you mean people could eventually take markings from wild cats or even all animals urine to mix them with their own cell samples in the petri dishes...ascende... this could work... as well as eventually we four who have already chameleon and plant cell enhanced skins.. we would perhaps only need to bath with some tiny amount of animal markings/urine to further enhance our biological gene wealth...mundu... i was reading on the internet a fantasy novel where a man and a woman who wanted to live as eremits in the wild met at some wild river and bathed there in the pools with the frogs and algae, they made lots of sex in the pools and peed in it, drank from it bathed in there resulting in them becoming enhanced with animal and plant features...we too might find it enhancing us when we bath in ponds and waterplaces where wild animals bath and take some samples for to cultivate them in the petri dishes in our labs ... microalgae, frog skin cells, other animals sweat.... mixing our own sperm or female ejaculation fluids into the petri dishes...although these were most important insights they shared till the last minute in the appartement, they needed to leave now to catch their planes what would spread them all over the globe... in the taxi to the aeroport they tried out their satellite phones with laptops so they could see luoma talking with the 6 interested to visit about their most recent insightsone woman did propose to build one big pool in the middle of the appartement where sometimes water could be taken out to let it filter down the water recycling installation with the stone and sand filtersthisway all the informations of the bathing processes would circulate again and againascende was jumping into that discussion.... why have i not thought about it, you might even plant some plants in the water what would help the recycling...perma....although luoma can decide on her own how and if she would allow such a semi-natural biotope pool in the appartement to be built... i find it a very suiting propositionlike this it went on ... they could not leave it alone while on the planes watching following each other in text and video chat thisway also not feeling the small but real pain from having to leave each other when they did find that wonderful harmonies

11- the this is that if you build the semi-natural pool in the middle of the appartement

the thing is that if you build the semi-natural pool in the middle of the appartement, it will totally change the character of the place, nila raised as an objectionwith the one of six wanting to be visitors who brought the idea up thinking about it for a moment and then saying in a soft melodious voice... you are so right nila, i have not thought about the importance for emptyness, nothingness in the research for the advancement of cellular

structures what good would it do to take away the center piece of the appartement what allows the built up energies in the experiments along the walls to flow into each other aetherically added the one who introduced herself as monica another one of the six aspiring newcomers, fernando, did add... i can only support to keep the appartement as uncrowded and as least stuffed with fixed installations as possible, i have seen your running and hiding chasing each other playfully around at the place luoma and nila and it seemed to me an important part of the integration for your newly reached cell evolution... luoma... as you said ascende... the ones who are here at the moment who are accepted members of the research enterprise, have full power to decide after hearing all of your inputs and monica's generous offer to finance the construction of the semi-natural indoor pool... we might find a place beside the existing bathtube along the walls... ascende... and eventually when the plant and sand filter systems will be in harmonious tune to provide the pool with a sufficient water quality, we or the ones who at this moment live in the appartement... might decide that there is no more need for fresh water pipes and emaille bath tubes ... as the informations in the semi-natural pools are highly valuable contributing to the cell growth of the ones bathing in it... mundu... makes me think of mix combinations from microalgae with human animal plant cells from the petri dishes living on in there continuously digesting and upcycling fresh input by the sweat of the experimenters fernando being excited now... i am a dancer and so are ava and rumu too who would like to apply to be among the next researchers and experimenters in paris... we will certainly sweat a lot while dancing with each other, looking singing enchanting the many coloured microalgae transparent see through bioreactors... i can think of us drinking the microalgae alive fresh watery juice and sweating it refined out, then bathing in the pools, cuddling each other while laying in the pool luoma... that sounds very contributing to our goal of integration and adaptation towards the merge of all kinds of living organism, i am sure we will have great dancing, bathing, enchanting and mentally imagineering times together... so fernando, ava and rumu were accepted by luoma as the next fellow appartement-mates and research colleagues, with the other three now introducing themselves there was michael, suleiman and li who were freshly finished with their studies at the university, michael a 30 year old doctor of human medicine, suleiman 28 years old a molecular biologist and li 29 having a graduate in plant anatomy they were living together in a rented flat in mumbai where their parents had financed their studies their parents were not poor but neither rich, with all of them providing their children with the liberty to proceed after their studies how they felt suiting their personal taste of life as they were accustomed to the kind of rational dominating thinking and secondhand information processing via textbooks, they volunteered to focus their attention onto the documentation of what happened so far in the parisian appartement in terms of reproducible methods ... how to grow a set of multispecies cells to print the flesh of my pinted at home android companion... as the overall theme... perma was very happy for them to offer their rational discipline, saying... we sure could use some cool look at all the many-leveled multidimensional progresses we achieved till now... nila supporting that and adding... and you might find yourselves being supported by the dancing bathing body voice

experiments of fernando, ava and rumu in the way like a wealthy person enjoys seeing live dance and music performance while eating...with suleiman answering,... might be so, but there is still the balcony to get away when the dynamics get that hot it would make it difficult not to partake fully in it mentally... with li and michael both supporting michael in adding in a happy smiling tone... and we might even put earplugs in when the kissing and fumbling or orgasmic cries from luoma, fernando, ava and rumu get overwhelming... this causing all of the now videoconferencing to laugh out healthilyadcende and perma then said goodbye for this moment as they wanted to catch some hours of sleep before landing in the south east asian regionmundu also only a few hours away from landing in the congo bassin started to chat with nila who was on the plane to the foresty lowlands of southern america, the amazons...he asked her... what do you think will the elders of the tribes who live in the forest answer us when we ask them for the admission to research in their territories... with nila replying... there might be all kind of different views onto our quest, we might be thoroughly examined on behalf of our intentions and motivations... will the androids robot companions designed to help humanity, will have an understanding of the native tribes wish to continue a most undisturbed traditional lifestyle of sustainably living of the forests offerings... some elders might tell us that we might support their land securing efforts with providing finances and as welcome guests may tour the area guided by the members of their tribe, but how we would sample genetic informations and use them for whatever purpose, that would be solely our own responsibility...mundu... you do not think they would find it against nature or ethos to gather life informations with the goal of helping new life forms to spring forth?... nila... naah... i do not see that coming as we will explain them how we lived together in paristreating the animal and plant cell samples with greatest gentleness, respect, appreciation... and that we are striving for helping to create many hundred thousands or millions of androids who will be given to the landless, indebted, enslaved in too demanding and underrewarded jobs.... that the androids our research aims to make possible will actually be given to the very people who come now to fell the trees and wash out the forest grounds in search for minute amounts of goldthis people then might quit their low paid forest destructing employments and instead sit together with their android companions to show them how to weave blankets, swinging hammocks... build pots and vessels from clay or press banana leaves into temporary usable plates, knives and forks, they might sell their wares directly via the internet to near or far away customers... others might decide to travel helping customers to build cobb buildings, using earth and straw, fallen tree branches and locally abundant ressources to build houses...again others might offer in union with their allways to the net connected android companion consulting services, on any topic starting from humans body health towards governing their local community...when mundu adds... as for the allways connected on the net, i believe that there are two approaches, one with satelites we eventually transport up in the earths orbit ourselves once the crowdfunding and delivery of the first batch of android helpers successfully happened... and the other component a one-to-the-next relaying broadband radio wave packet transmission technology what would allow the

androids to share access to the global net also in case there would be no satellites... when nila cautions... but allways on would eventually be of a disturbance to the natural ambiance of a mostly wild place where for example an android would be taken with or go there for its own personal research and individual growth... mundu agreeing... we could design the radio waves following the insights we gain from the cell merging processes...ascende being woken up by the landing preparations on board of the aeroplane he travelled with, jumped into their exchange... i have just now followed your last sentence mundu, probably the rational observations and documentary approach of michael, li and suleiman might show us how these kind of more organic natural or near to natural antennas might be built...nila... or saying... what kind of cellular combinations could grow into such information sending and receiving organs...perma also awake now... mmmhh... eventually we might find a whole new approach of growing bones and flesh tissues ... the cell printing 3d printer instructions eventually being less top down deciding how to lay cells onto each other but listening somehow to the growing dynamics of the living micro units itself

12-perma and michael discussing the possible changes for the 3d life cells printing device

a tries to write a second text the same evening at his laptop,Ä¶ continuing the esoterically selfgrowing allowing life cells 3d printer line of thought ,Ä¶ interesting you point out the construction of the printer, michael said, sitting in front of one of the models ascende had bought for the possible use later on in the research project we have studied free energy, zeropoint, overunity effective devices via a webpage when we were in mumbai studying for our internationally respected university degrees he and suleiman as well as li were now on the aeroport, having invested all their savings to catch the next flight to paris were they wanted to be there where history happened in cell biology fields,Ä¶ li now saying ,Ä¶ we have not figured it out yet how the different prototypes work, some with magnets and teslacoils, others with hho, others using water atomized as fuel, some with only a few moving parts, others with turbines and fast rotating setups ,Ä¶ some even have levitation side effects ,Ä¶michael,Ä¶ imagine if we could provide the android with such a solar plexus, the center of the vegetative nerve system being a free energy device so the android could power itself even when not exposed to the sun and no food vital energy source is available,Ä¶ ascende and perma were now landing in padang on the island of sumatra it was the end of the rain season, it had just stopped raining with mists rising from the now strong shining sun, ascende felt the food like feeling when his skin exposed underarms came out of the aeroplane in direct contact with sunlight in his dataglasses he could follow the text chat they mostly had with him typing some text with his sensor band

equipped fingers, he wrote on the sides of his upperlegs, it looked like he would silently play piano or drummed a rythm this is hot stuff what you are talking here, me too has read in the last 15 years many hundred reports how inventors were trying to get their kind of working, working to some percentage with overunity, at other times not working or parts breaking, depleting etc. ,Ä¶ kind of, i believe that most of the inventors, engineers and makers have good intentions and really want the devices to bring some intelligent and sustainable energy to this planet as for humanity get away of this stupid coal, oil and gas burning trip a sadly high percentage of the industrial places now worldwide are hooked on some probably are frauds, meaning that they either with knowing it oversell and underdeliver, possibly thinking they would deliver the real stuff later or others eventually outright cheat ,Ä¶ perma,Ä¶ when ascende showed me the webpages with the reports about the inventors, inventions, devices what are on the way to the marketplace or have been nearly there ,Ä¶ i found it difficult to discern exactly the degree of righteousness of the inventors ,Ä¶ micheal ,Ä¶ agree on that, possible that we have studied the same site, but there are also the open source plans and descriptions, if i only would understand a big enough part of it so i could 3d print some parts to replicate some devices,Ä¶ suleiman ,Ä¶ i am beginning to see some dynamics and schematas, i mean learning to read them and follow the logic ,Ä¶ li,Ä¶ mmmh,Ä¶ let us not hurry this one up, we might find enough time beside documenting the cell evolutions to look into the plans and blueprints the inventors have open source put on the net,Ä¶ perma agreed on that, talking into her micro she wore on the sides of her blouse near her throath let us come back to this possible change of construction the life cell 3d printer would need as to be able to give the cells enough time to grow into each other ,Ä¶ must not be too difficult, eventually just find the right time intervall when to print a layer of cells and when to make a pause to let them find their own growth pathways,Ä¶ suleiman ,Ä¶ with us having studied the microscopic movies of the past successfull mergings, our inner imagination will eventually help the pathways to form when we look at them ,Ä¶ like while they get printed, we look at them via the microscopoc cameras and compare the ongoing cellular communications with the patterns we have seen from the recordings ,Ä¶ li ,Ä¶ we could also have several monitors beside the 3d printer what would show a life feed of microscopic lenses recording luomas skin, as she has allready reached the photosynthesis from plants and chameleon abiliites, she wearing a kind of cameraband on a part of her body with what she can move around mostly undisturbed,Ä¶ micheal,Ä¶ i have great interest to partake in this journey myself to contribute something, like i will swallow some tiny camera what will show me how my internals look when i take a bath with luoma and some cell samples as to grow superhuman too ,Ä¶what am i saying super, it perhaps is more like, more complete ,Ä¶ eventually,Ä¶ luoma,Ä¶ hey who said i would bath with you,Ä¶ no i am only joking, you look quite attractive and sensible, we sure will find each other tasty enough to aid the merging with our joy drives of body near field interactions,Ä¶ suleiman and li were not really into the bathing stuff and kind of same like mundu were looking forward to embark on a journey into the wild to find their very own animal and plants moment when their animal/plant guide would donate them their cellular present they were

thinking about going to the congo bassin when the documentation process of the initial research phase was documented and to some parts theoreticly explained, "up to the point where they arrived in the appartement , what was about half an hour from now, as they were landing in paris an hour later than when ascende and perma landed in padang, sumatra, or the other way round, depending on what route the fuel burning aeroplanes would have taken and what models etc," the author a is at this moment not sufficiently interested to provide accuracy or realistic calculations but a sense of humour would be nice too is not it so isnt it , ah well, what is nila doing, she having landed or soon will be landing in sao paulo to meet the five friends of her what she allready told she wanted to go with them on a mission into the amazon she was kind of dreaming imagining how she would approach the parrots in the forests, ask them for their blessing and cellular assistance so she might eventually find a way to integrate their cellular knowledge into her being , if possible she then could set up a laboratory at her place in sao paulo similar to the appartement in paris and the 6 of them could practise some merging sexy meditation sessions , the topic of the cell printer and all the documentation explanation thing was not hers, she would not want to touch machines if it were not necessary like with her phone using it to communicate and watch stuff , she liked bodily sensations, vibrant colours, dancing, bathing, sporting exercises, sexual sessions as well as meditational dreams, with her was no shame but only unconditional sharing of what she liked, may it be yours too she often said with a strong glowing emanating from inside her, she ripe and plentyfull with cosmic rays from the deep good home

13- some autobiographical obvservations in the middle of it all

it may look funny or kind of strange to the reader that the experimenters can not let go of talking and chatting to each other, jetting around the globe while discussing possible hardware or process flow design of life cell tissue printers what is all the rush about one migh think...and yes if a looks at it, there is much excitement in all this tale of a possible arising robot companion dawn, excitement as in, a himself feels like he should or would really like to contribute some part towards the uplifting of humanity out of the scarcity and general fear and fight for survival state... a projecting some of his characters or wantings to be his character traits... onto the protagonists in this fantastic novel... it might be part science fiction, but then, a is well aware of his lack of technical accuracy and himself just too much into potential storylines, scenarios, episodes following each other to get down onto a sober description of the tech he writes about...this not an apology but a kind of sidenote to the reader or a kind aufforderung to eventually check some more technical serious places in the nonfiction paperbooks or internet to read about the exact workings of cell biology, overunity, zeropoint energy...

having said this word of caution... like...do not believe anything written here as this is bare fantasy being pounded into a smartphone by an impatient author who thinks that his writings will do something to entertain or even inspire some fellow human beings... hey why so cynic... let a say that nicer, like... a is well aware of his personal situation being fuelled by an urge to contribute to the betterment of the human handling of the resources this planet provides, this wish to share some potential future scenarios with his fellows makes him excited and in the heat of the moment the accuracy when describing technical concepts... is missed or at times quite severely lost... on top of that comes a certain logic-lazyness of a who was never really into mathematics, causing himself in these days to just babbel on with the ideas regardless of consequences on the eventual readers mind.... ahh here it comes again, the doubletwisting wanting to be funny again, are you not... smiling to himself both a little amused and part annoyed about the length this excursion now takes on... the length, here coming to an other aspect of a s behaviour... oh why not just dive into this for once, a little detour highlighting an amateurs aspiring writers mind... although he thinks that the most beautiful and his mind impacting novels have been siddhartha from hermann hesse and the starmaker from olaf stapledon, they both sharing a length of not more than 100 or 150 pages, he thinks somewhere along the lines of ... if he could just keep on writing several thousands of words a week that would train his storytelling muscles very well... and who knows, if he would just keep on letting it all out as it enters himself when he is in inspired or kissed by the muse states... after perhaps having written great amounts of sometimes only loosely fitting together parts... a might one day enable himself this way to write and hopefully illustrate a nice cozy heartwarming piece of hilariously romantic and life fizzled gayness... he prays to his future self that this 90 page enchanter might not be too far away now... a 90 page symphony of well clicking into each other precious handcrafted gems of mental emotional comfort inducing lines and letters arrangements-----selfobserving note... it took half an hour to write this two thumbd on a 4" touchscreen... wondering how well a fold out bluetooth connected keyboard would allow 10 finger typing, ah yes, these were times when a was sitting in his camping chair balancing the tiny nokia smartphone standing on the holder sponge of a neat little clapout keyboard... mmmhh makes a want to search his belongings to find it again... annoys him greatly that he lost sight of it since about half a year, unusual as he finds himself having somewhat a kind of half certain knowing where he can find things within his belongings ranging in the size of approximately 20 banana shipping boxes

14- free energy device in the bloodstream

while ascende, perma, nila and mundu are switching off their technical

communication channels a while or better said, change their focus of attention towards the happenings in their near physical area, planes landing, custom procedures, new colour combinations and writings on billboards, notification signs, unseen human crowd movement patterns, the thrill and blessing of traveling with its novel smells and refreshingly different sights... so while they were shifting their focus onto the material immediate surroundings... micheal, li and suleiman too were slowing down their pace of external chatting, partly because them too were letting in the rewarding experience of arriving at a new space, them now getting out of the taxi in front of the building in paris where ascende had secured the appartement with the money he got donated with for his lifetime artwork... here now would fit well some flowery charming description of the smells of freshly baked croissons coming from the bistro around the corners, a sound of laughter from a relaxed young lovers couple who just came down to strenghten themselves sitting at the terasse drinking some coffee and let the mild afternoon sun compliment their faces... but there is more chatter coming online, it is michael again who thinks about how possibly could the zeropoint exotic free energy device mechanisms be translated into the language of guided or helped or ... motivated... biological flesh cell growth.... after that moment when the three got out of the taxi, cherished the bistrot emanations and looked up at the building where such exciting work was waiting for them... he could not help it but. had to tell suleiman and li about this idea while they ascended up the stairs carrying only some small hand luggage... they were of the the less clutter and belongings the better ... types of people li said... i see thousands of tiny wheels and turbines made of bonelike material being turned inside the androids veins and arteries by the flow of its blood... their motion translated into currents of electricity what is stored in battery like layers in all areas of the body... and suleiman adds to li s imaginary.. with magnets and coils made of muscle tissue nerve strings tendons and all that, rotating in the cave where with the human anatomy the stomach is placed...that is quite something, luoma shouts out to them from up the stairs down to them, you are envisioning so inspired, makes my heart jump ... when they reach her and welcome hugs are exchanged... please come in and feel at home, it is great you made it that quick to come to be here....writing analysing note: 20 minutes....

15- light traveling inside the body

the mind sends an undefined colourly to the heart, from where it travels in many colours towards the extremes hands feets brain the impulse of light being sent is the a sensation travels from touching the arm to the brain via the heart 0 a sensation on the leg travels in many colours of light to the brian via the heart a side research topic of li was the possible visual depiction of what could possibly happen inside a human

being when receiving sensual stimuli one picture she is working on both in his mind and on the computer... a smell enters the nose and as soon as it is recognized by the flame in the heart of the person, its many fragrances and smell components molecules travelling the air get translated into variously coloured lines of light same with touch sensations, amouse bouche pleasure in taste all senses incomings what are being somewhat counscious registered and processed the second drawing was showing a moment when the experimenter li creating inner light in all kinds of shaped rays lines circles cubes with colours according to feelings hereby the mind sending light of unspecified mild pink violett or white or golden colour, the heart then adding its definite colours and sending it towards all extremities head feet hands some lines were parallel some intertwining and rolling with each other in the stretch to meet the toes and fingertips rainbow snakes interhuddlings of thick and thin pulsating or steadily glowing brush strokes of life bearing light these two modi how the light can travel within a human animal and or plant body one via sensual stimuli the other via guided inner light mental spiritual light productions possibly emanating from the brain as a receiver of the cosmic light powers michael and suleiman were having this plans of free energy devices in their plasticly modelling imaginations and suddenly felt like drawing with light could be an avenue where eventually the hard precise and dense parts could be replaced with more soft and foamy ones., or it would perhaps not need any bigger modifications as the human body eventually was built to make this light ping pongs or sustain its organs with pleasure guided light and love journeys electric signals perhaps ? brain firing sparks what smoothly stretch into glowing strokes of nourishing light deepening and refilling all body cells nerv endings reporting yellow or pink blue and red sensations to heart and brain the first day michael and suleiman and li arrived in paris they spent looking at the experiments what luoma was telling them this or that bit, watching some recordings of previous petri dish film recordings but nearly half of it they painted and fantasized on this light travelling within body theme the goal seemed to become finding a more aetherical way as for electricity being generated inside both the human and the android body how to get there by recognising what possibly the body allready does when in relax and or enjoying mode... and by analysing what happens in the experimenter researcher feelings or body sensations while drawing inner mental guided emotionally fuelled imaginations the three of them were being donated some money from the three dancers what arrived a day later fernando, ava and rumu were living in the alps of middle europe, enjoying the regions the lived financing their appartement rent plus providing money for food and clothing.... as they did not eat a lot mostly oat and raw fruits and vegetables what they got for free from the farmers where they occasionally did dance practices... they could save up each 2000 what they used about a fifth to travel to paris by train leaving 4800 michal, li, suleiman, fernando, ava, rumu, luoma were looking in the net for 7 headsets and upper body sensor ladden textile what would allow them to record their brain heart blood pressure activities the following day the 7 sets arrived what fired up the researchers acitivities another notch them now recording via voice and sometimes video what they dances what inner pictures they painted and what skin touches felt how ...

with the time logged mental activity as well as heart beat and pulse recordings, there would be mountains of correlating data what an artificial intelligence as well as the human observer could search for certain rules and laws of what stimuli and or imagination results in what colour intensity.... that eventually one day allowing both human and android to visualize an avocado and really feel how its natural good fat will deeply enrich the organs and the blood with good nouriture... without it being grown or eaten... just with the combination of the recordings their conclusions... that many times one had this sort of touch and it resulted in that kind of heartbeat .. this many times one thought about a certain shape and it resulted in that kind of breathing pattern... could there be a way one could touch each other or oneself what would bring the satisfaction to both touch receiver and giver... the satisfaction of eating a tomato while having a neck massage.... the dancers were trying to dance pumpkins and onions or flower scents... luoma was bathing and sharing her skin with whomever of the seven wanted, also li found herself being quite often in the now built pool enjoying both quiet meditational settings as well as the sexy ones looking back at this lines of text... not with reading them but how it feels now having written them., a thinks of ...matschig, teigig, no precise and dimm, missing the central part... but now there is an idea.... ascende and perma were calling in from padang ... out from the jeep what will bring them some couple or hundred kilometers into a primary forest with tribes living from it they were very happy to hear about the seven in paris doing a complete new branch research for the android project... mass data collection and intelligent mining analysings what could give the androids artificially intelligent processing head a glimpse of what movements touches smells inner paintings visualisations could heal ... hunger li said to that description of what they were gathering coherent data for., hunger for nourishment, hunger for sympathetic love, hunger for understanding... it is not only the question... how can a human being as well as an android tap into the probably enormously vast oceans of cosmic raw energy and use it for good body heart brain fuel ... but the other question... is there one or many parallel spaces where this mechanism already are understood and all participants of the game to live are applying it like we do breathing automatically in this special bend of the reality spaces

16- autobio or a reflecting on previous happenings in this storyline

there are now 2 possible continuations... one to go with perma and ascende to sumatran rainforest trying to be a fair witness to how the two industrialised humans get in a respectful contact with a or many tribes what consciously decide to stay away from machines as much as possible and remain in close contact with earth through collecting the forests offerings a does favour himself to be a vegan person who tries not to participate in

animal encaging as much as possible but a would never deny a native person to hunt an animal if there was a need for the tribe or himself for meat mmmhhh... but then when exactly starts need and when ends the comfortable but not necessary area a believes that every person who participates in enslaving animals or hunting them... needs to deal with this consience question... when does one really need the genetic informations of a fellow animal to heal oneself from a memory loss .. or positivly said... if one can jump like a gazelle and be that attentive as to other animals movements and sounds... one would eventually find access to the antilope gene pool by imitating trying to behave like it another precaution sentence or more to naming of people and places as with paris and sao paulo i do not find it problematic as there are millions living there so the chance that a catches a real persons lifeline meaning one sees a real existing persons life in form of protagonists like michael, suleiman, li, fernando probably mundu too is a widely used name ... but ascende perma nila luoma ava rumu seem to be quite unique so a would actually change edit these names and say mirael to michael andoref to fernando luoi to li simhoan to suleiman as for the tribes, it feels to a like a risk higher than necessary to perhaps have glimpses of a real living person if one would find the right name of one member of a tribe a does not want this connections of fantasy with real living persons as it could become a projection like a reader of this texts has a friend called li or a famous person is named like suleiman and the reader does not feel to well reading something with a name of a very respected person doing things what the reader thinks the famous person would not do... following this a could only metadescribe it like without naming the forest and samewise not naming a tribe name this could apply for nila in the amazon, mundu in the congo bassin and perma ascende on sumatra thisway there seems no complications arise out of storytelling when only very few real names of places and people are being included in the fantastic writing mmh.. eventually even paris, sao paulo, sumatra padang, hawaii and canary islands could be changed around into rispa, olopa aso, matrasu dangpa, aiwah and racan if a does now this renaming he senses a devellopment of the story into more freer concepts of how human animal plant bodies can intergrow into each other without much manipulation and cutting but with loads of time and fun gayety as to vibrate the place up into the uplifting jet streams of the utopian cosmic thought train a knows of himself to be a bit lazy when mixing up informations of real life technology what really does something better for the human needs than before every motor what uses less fuel and or treats the fuel with a more efficiency... is welcome as the billions of people starting to now have cars and motorbikes, fridge tv and so on... the loads are becoming higher on mother earth ... following this one can possibly understand the android research project also having the direct cellular becoming more whollistic evolution of the human being part with here a kind of half magic esoterically wishpower motivated cell remix in life skin tissue the other half perhaps some bits of science but mostly half-intelligent storyfilling mmmhhh a says now he is trying to bulge the stories up as to smuggle in his real life concerns... but then there is real rainforest in many places on the planet dissapearing at that moment when he writes fiction... how would a not want to write one most beautifull and wise and humorous light and in a gay

mood... piece of text what could eventually inspire a half-rich person to donate some two millions to him as a hommage to the last 15 years of his writings fotografhing filming ... yes a would take it and most possibly try to do something world changing for the better with it but of course this not being the reason but why not a possible consequence having talked about some small parts of names and the possible influences of fiction writing on real living persons... but then, exaggerated also

17- mirael luoi and sulmanei in rasep

miraël luoi and sulmanei in rasep oh the names do not fit yet but this could a source of humour the names slightly changing some letters around of the previous what influence then has fantasy name giving onto the development of stories... it is starting to rain at a s forest relax place and getting colder... nila in paluso aiming to get to the mazaon forest mundu in ocong bassin and ascende perma in the overland vehicle four wheel drive car towards the primal forest of trasum having landed via aeroplane in angpad ... the three expeditions have had the desired outcome with local living tribe members accepting their presents of each 60 000 what was used to buy the title to their lands with the nation states what claim to have autotithy over this region mundu built a very simple experimenting place where anyone tribe member or eco tourist could continue with the peacefull cell evolutions and inner mind drawings of how an human animal plant enhanced android could nurture itself from the visualisations of body sensations cell signals and the light effects of mental wishes onto the body

18-nacabsi

a being warm inside now writing at the laptop ,Ä¶how can he get out of this autobio trend now in full speed entering the fantasy fiction parts ,Ä¶ mmmh.. is it a guilt complex having not told a brilliantly colourfull tale around how the visits in the rainforests were ,Ä¶ or the confusion about how important are names ,,, would it be better to write the commonly used reality names or should fantasy names save the disconnection of fantasy to reality ,Ä¶ but wait, disconnection ,Ä¶ what trip of fear is that ,Ä¶ is this not about growing softly into each other, understanding, enhancing, getting wholesome and handarmlegssome humanimalplant element enhanced style ,Ä¶ yes it is, but then ,Ä¶ how many readers will that text have who are fuelling the effects of the story onto reality with their own recollection

of what they wish to the world to become better ,Ä¶ how many readers might this text reach who could eventually being led with the namings to project some emotions and inner pictures towards a city like paris, risap, rasip ,Ä¶ oh yes, it is in full swing, the blabbel like i would talk to the baarkeeper when being drunk and having no one to tell him how i am stuck in my writing, facing a wall of sober cautionairism luoma, donanref, ava, umu were mostly dancing around the experiments aeroponics, bioreactors, petri dishes and bathing at times in the pool they have rebuilt into a semi-natural one with now still having one classical bathtube what was able to pipe freshwater in and release used water in the sewer canals of risap luoi was learning fast from luoma with her skin being merged with ascende and perma ,Ä¶ luoi too was after three bathing meditation sessions with luoma enabled to soak up the sun and photosynthesise the light into nutrition ,Ä¶ mirael too was joying in the bathing fun while manulsei was actually the only one still using the rasip city water as to not become changed too, he somehow wanted to keep a strictly human genetic of course he kind of wanted to join in the fun the others had bathing together both in meditation as well as in sexy moments, but he felt allready blessed enough to be here to see his friends metarmorphing so he was actually so excited by his fellows growing into completion, that he found more and more evidence as to why stay human ,Ä¶ not actually fearing that the process might be having some negative side effects, why should that be ,Ä¶ as there was no synthetisation happening and no forced separations or pushed fusions ,Ä¶ the processes in the rasip appaarent laboratory went slowly, over days, on the cellular getting to know each other and try to intercopulate till a possible recombination could be found or no synergy was possible mirael and donaref were wearing their body signal recorders during the 5 times they bathed and at the fifth time became plantanimal cells enhanced the database of correlated recordings of what happened in the outside with audio and video capture ,Ä¶with what happened inside via the body signals recorder sensors ,Ä¶ the database archiving all these connections ,Ä¶ would eventually enable the artificial intelligent software of the desired android ,Ä¶ the database could eventually enable a self learning and itself software and hardware wise improving tuning ,Ä¶ to understand the reasons for hunger or otherwise said how a recognition of the benefits of touch, smell, sound, visuals can send light to ones heart and stomach,Ä¶ or how a pretty picture of oneself at the pure sandy sunny ocean beach ,Ä¶ cohowuld eventually warm a person suffering from being exposed to cold weather for example ,Ä¶ one of the future android eventually being asked to descend thousands of meters down to the bed of the oceans to close a leak where some oil drillings have caused a mess ,Ä¶ there it could be very practical if the android could imagine itself being exposed to the sunlight ,Ä¶ or any other scenario what could balance out the cold and dark sensual inputs he would get down there the documentation of the whole project since perma has moved in with ascende at the appartement in rasip, has not been produced yet in a form what would show some serious order and continuosum ,Ä¶ as there were a couple of side themes what asked for jumping at them when they came in to the discussion ,Ä¶ or one experiment reacted to the evolution of an other petri dish culture ,Ä¶ the dancers saw via life microscopic projections onto the floor the changes of their skin cells how

they grew into each other ,Ä¶ the love makers in the bath could look up at the ceiling to see their skins being enhanced while bathing in the pool what was alive now with all kinds of organisms growing from petri dish grown samples and microalgae, body fluids ,Ä¶ all fluids and samples of cells were being contributed with the most possible gentleness and soft smooth handling, joy and fun being the lubricants for the cell types to grow into each other as the visits to the rainforest areas were happening in mutual understanding and dignified styles, ascende and perma were not longer than a week later arriving in nacarsie islands where perma had her permahouse or permahut, her garden following the notill but mulch principle ,Ä¶. nila having been allowed to donate 60 000 to the buying of landtitles for parts of zonama forests, she wanted to join ascende and perma after she spent some days with friends in the paolosa appartement introducing them via webcam to their parisian fellow researchers ,Ä¶ as not to complicate the already too complexly written story ,Ä¶ the author, naming himself ,Ä¶ a,Ä¶. does not intend to come up with some new 5 or more names for the new researchers in paolosa ,Ä¶ nila arrived at the hut of perma about a week later than the two who have made use of their new found quiet and silent slow lifestyle on the island with no camera and experiments to look after or to look into and produce some externalisation ,Ä¶ while mundu was successful too in the nongco bassin and flew further to awahi where he intended to start at first step finding himself a situation where nature animal and plant realms would share their spores fluids semen eggs branches saliva urine leaf dew with him in charging moments of over logical super emotional instances ascende, perma and nila stopped recording, phoning, chatting electronicly for a while with themselves too talking less and less to each other, but listening to each others moans of pleasure and relaxation when lying beside each other in the sun or when swimming in the ocean, jumping of a rock into the water, dancing at the beach on sunrise and sunset, picking the berries and pulling carrots out of the ground ,Ä¶ they lived a simple life for about 4 months ,Ä¶ when mundu and his two awahi friends were progressing quite a bit into building a field laboratory what was not far away from being as functional as that in rasip ,Ä¶ but of course here was the air a lot better than in paris, the flow of it as well as its molecular content ,Ä¶ the roof and walls of his laboratory had big window glass elements with the bioreactors of microalgae soaking it up very thankfully as well as the inhouse tomato bushes and cannabis mini trees .. oohh,Ä¶ amtoto red squishy fruits the size of a fist ,Ä¶ making a delicious utschkip ,Ä¶. haha, very funny ,Ä¶. but perhaps it is ,Ä¶. nacasib growing all over the place boom boom bolee

19- mirael manulsei and luoi were returning back to their documentation efforts

of the first few weeks when ascende and perma changed their skins into

multispecies ones after three months of wearing the body signal recoders and correlating audio video recordings, they as well as the dancers and luoma were now most of the time working researching without so much recording the dancers and luoma spent much time now with the integration of their new cells and the abilities it brought for their body sensations ... the seven still continued to draw how they felt their inner light was travelling inside their bodies ascende perma and nila were doing not too much neither but mostly enjoying themselves mundu was quite busy going around on awahi to enjoy smooth encounters with wildlife, collect urine and feces of wild animals, feathers and skins being given to the environment in purposeful actions... there were sometimes acts of violence involved around the body parts mundu found, but he asked himself if there was hunger involved as the motivation for a killing... the remains might not be that negatively charged compared to for example a researcher capturing a live free living animal in order to take live cell samples of it without its consent mundu did cultivate much of the cell material in his field lab on awahi, some of the cultivated remixes or several cell types having grown into each other the slow and peaceful way, some of these cultures he did send to risap where luoma and the dancers nandorefa and rumu were bathing with them other parts of this sendings from awahi were cultivated in the petri dishes in the city appartement of rasip under the tireless attention of mansulei who was now still not bathing with the others in the life rich semi-natural pool he stayed strictly human, having a sober and most objective view on the metamorphosis what happened both in the petri dishes as well as with the human experimenters themselves now five months after perma and ascende started to change, there were hundreds of successful animal plant, plant human, human animal.... cell intergrowings both in the petri dishes as well as in the semi-natural pool where all except mansulei bathed regularly mirael and luoi were sometimes swept away with emotions and inner light journeys ... when they were done with the documentation work looking at it from a bit afar, and when reading the comments and suggestions of the several dozen follower of the research, the ones watching both the microscopic camera live streams as well as the dancers bathers and documenters enjoying and working... the feeling arose after another month like this... now a half year the research ongoing... the feeling arose as to put another step forward... perhaps presenting the documentation as well as opening access to the many thousands of live recordings both micro of the petri dishes and macro of the whole appartement.... allowing a wider audience to share the gathered material so far there was also all this hundreds of hours material audio and video recordings correlating to biosignal recordings with the formulated intent to provide a database for visualising the nerve signals from sensory inputs into a truthful manner and possibly find out how internal imaginations affected the body directly... it was at this time when both the fans of the research as well as the contributors felt it was ready to go one step more public.... that ascende perma and nila were contacting the appartement in risap they were planning to stay a bit longer offline as to deepen their cellular growings and keeping their focus totally onto their encounters with each other and their natural surrounding perma ascende and nila were listening intensive to mansulei when he tried to give a brief overview what happened in the risap

city appartement during the last five months especially happy made them to hear how mundu was able to cultivate the animal material he found with plant and human material in his field laboratory in awahi they agreed that it would a good time now to present all the so far gathered data both documented and analysed as well as the uncommented raw life streams for free to the general public with no restrictions attached as how everyone could use the insights and methods found by their research mundu was also calling in at this moment, him too being still unchanged like mansulei, not because he really did not wanted to become multispecies ... but he felt attracted by the mindset of mansulei what consisted of an unexcitedness and cool detachment what still had a warm glowing sympathy for the overall goal of the project to allow humanity to evolve into a more complete a more whole being mundu too agreed on the plan to present a compilation of their gathered data and successfull cultivations to an even wider audience, without paywalls or asking for contributions but... he was emphasizing in the discussion what how to present... there could be mentioning of what kind of magnitude of finances could further this or that branch of the several types of research they were into and directing attention onto the various fields they have not yet ventured into for example the build of the skeleton everyone agreed on that too so the next three months went by with mostly mansulei luoi and mirael producing all the documentary and overviews with the projections for future milestones to be reached with this or that much both human researchers time investment as well as with this or that much financial backing after 8 month since perma moved in to the rasip city appartement, mansulei as the leading author together with his documentary assistant presented a 300 pages paper with many links to online video and audio recordings, body signal recording sets ... it found a overwhelmingly amount of interest both in the acadamic field as well as with the future enthusiastic laymen and laywoman or more gender neutral said ... the ones who hoped utopia would once be able to built on earth with the sensitive use of technology, balancing esoteric with exoteric knowledge to end the killing money began to pour in with small amounts but many millions contributed, unasked for some popular science journals and gadget news sites were picking the report up and celebrating it as of its both entertaining and fantastically inspiring contents as well as lauding the professionally scientific conclusioning comments descriptions and well named links to the various types of audio/video/ signal data sets within these millions of fans who sent some 10 to 100 money were also a couple of thousands who were asking how they could participate in the research, if they could get some samples sent to them for a bathing upgrade and or cultivate the evolved cells at home in petri dishes some wanted to visit the rapis place to enjoy bathing with luoi luoma ava rumu and andore... so it got busy in pasir mirael and mansulei found their work to be done sufficiently and wanted to go back to south arimca to see both places the house in palosa as well as go sampling in the rainforest places ascendes money helped to secure they left one day after the report was presented on the second of january 2022 a week later a letter arrived in paloso of a famous enterpreneur who made several billions with future benefitting technologies (no mentioning specifics here as not wanting to assimilate a real currently active enterpreneur with this fantasy...) but

let us assume this visionary entrepreneur would have built several multistorey high vertical farm buildings in major millionpersons cities all over the globe selling the produce at a little lower price than at the local marketthe letter was having a proposal in it ... that mansulei and mirael would help him build up a 100 million investment plan as to commercially produce androids what would be sold for reasonable priceshigher than what the researchers have proposed but still under ten thousandalso they were able to use all of the research and intellectual data of this venture in any way they likedmirael liked that bit with being able to use all the gathered knowledge gained with a abundantly prefinanced roll out of products... while mansulei was cautioning that most of the necessary research and construction samples materials were not yet here in the present but depending of the engagement of thousands of researching hours waiting to be contributed in an equally leveled mind fashionthey wrote all that the same day in a letter to the entrepreneur, answering with a fundamental yes they would love to help roll out hundred thousands of androids for no more than ten thousand the piecebut the necesssry research till it would be ready for production could well need 3 years for example with 50 000 research hours invested by perhaps 50 to 500 researchers.... with that being the question mirael and mansulei asked joho the entrpreneur... how could we find these fellows and will they too be allowed to build on top of the researchthe next day an email came from joho...i am so happy you are going to help doing this... everyone working on this project will be allowed to use all the data in a most open source way... i feel that wr do not need three years but a half one when 2000 researchers will join us.... me alone i know about 300 who will love to work on this especially also as it has this human evolution success what ascende, perma, nila, luoma, luoi, andoref, ava and rumu have shown ...mirael and mansulei felt right about that offer of joho, they called ascende and perma on their secluded permaplace in the ancary islands ...ascende was crying tears of happiness when he heard of the bold plan to produce hundreds of thousands of androids in such a near timeframe and such a an affordable price with all the intellectual material open source available... he and perma gave mirael and mansulei their blessing for this venture and thanked them from their very heart from having reported so whollisticly well on the groups researchmirael saying then... do not say goodbye to intensly, we will be back soon to crossfire the roll out of the 2000 euro dollar pound android for the masses, we might even find ways how people could grow their own android at home...perma now jumping in... yes, a kit containing our advanced 3d printer what gives enough time for flesh and bones finding their very own structures and building microcomponents to stack assemble with each other

butterfly and batubretylfabtnilai was asked by mirael and mansulei if she wanted to join their management team for the 100 million android production sell 100 000 at a price of 10 000 or 200 000 at 5000 with each costing between 3000 for the 10 000 model and 2000 for the cheaper version nilai was in as she longed for some younger company as well as she wanted to meet butterfly as well as bats in the rainforest of zonamia she would ask them to join her in her body journey to human animal plant completion her condition for the working with mirael and mansulei on the commercial rollout was that she would donate some of her cells what she could grow on and in herself for 3 million what she would donate to the native tribes some bigger pieces of rainfoest could be secured that was cool with johoh the investor, he liked hiking in the kiroc mountains and he was delighted to have an under 30 year old providing cells as matrixes or matrizes after which the androids could be built upon nilai went with a boat from nacary islands to pasin and from there took a flight to palosa and again there taking the boat to get into zonamia forest soh but wait it is lembe in south cerima where she took the boat on the way with a boat what had an electric motor fuelled by photovoltaic panels on the side and on deck of the boat she met thousands of butterfly at day and hundreds of bats at night allowing her to understand more and more about them one night ... nilai went early to sleep after having eaten some freshly harvested rainforest fruits she collected in the forest at the side of the river... stupid it seems this namings ... descriptions lacking vividness ... he please a stop interjecting your critic autobio wish thingie... but hey, how am i the author as a and whatever so cruelly taking away the attention away from nilai lying on deck of the boat listening to the evening forest serenades mix.. puuuhh... made it again upwards... at around 10 in the evening or about after sunset 2 hours later or half an hour, the bats she saw usually hunting in one or two meters distance from her were hunting mosquitos closer now at ther nilai was so relaxed and thankful for the bats to bless her with that trust saying we come into your reach of arms and feel you are not gonna harm us... she smiled silently lying on her back sometimes with open eyes sometimes with eyes closed concentrating on the air pressure changes or winds she felt on her face as a result of a bat flying above her in 50 cm heighth catching a mosquito what was aiming to suck nilai s blood the bats were kind of an organically moving mosquito net one could think of a possible fluid like saliva or something of the bat dropping on nailas naked arm where her already chameleon and plant enabled skin would soak up the dna of the bat and created an access to the cosmic bat data cloud so is a an utopian what brings dystopian self critic or autobio stuff in to get some other story colours than happy pink and violet flame seriousness nilai had some 50 000 of cash with her and 2 950 000 she could transfer with her satellite connected smartphonewhen she arrived at the tribes to gps photograph borders of what they understood as their hunting area for later aquisition of titles of the land with the national states surrounding the forest nilai and many tribe members felt doing the wrong thing when she transferred hundred thousands from her account to either a tribes account or directly to the national governments treasury departement how much poor people living in the slums of megacities could be helped with that money.... but still they did and thought by themselves...

this money is not from the earth or even if it is stolen trees from her and secured with stolen gold ... this money is built on weapons, built upon the will of someone to use violence to defend his loot from plundering the earth... not that the author would live a feather light ecological footprint ... ah yes here the link this money is not soft and respectfull enough so we can give it back to you with good consience we will make better cash ... both nilai and the tribe members were singing out in a bit sad but also happy tune, weird harmony but let us fly back on the wings of the butterfly can one imagine the perspective just in this moment when the reader sits there in a restaurant or cafe house and reads this ... oh is that now a shizofrenic show or mad writing to find out how the author can divert himself from what he actually wanted to tell like playing chess afainst oneself who talks more winds wins... ah no... the cellular evolution is one focus here ... bat gave saliva what nilai chameleon plant photosynthetic nilai analysed sensorically and on an overself level ... like when one really lives in a moment and the core data center fluid mellow lovehoney of prime essence of cosmic beingness... a fraction of a second in a kiss... or an erotical orgasm ... a moment of oneself having surrendered the control over oneself to the greater we of just this moment... before and after that particle of a second everyone is feeling in a majority of control over oneself actions ... it could be that a has this fear of a nice story badly narrated so he goes into autobio reflective ego psycho doc hour mixing with a potentially superb storyline ... nilai thanks to bat and butterfly joyfully donated essences was enabled to start the production of many hundreds of thousands of android machines with selflearning artificial intelligent software who would by the way improve their own source code plus hard fire soldering their electrical circuit motherboards but wait ... was not the plan for the android be non metallic and wet and grown like bone and flesh ... so let us forget a just described that outdated picture of an android soldering around his brain platines... nilai gave hair and saliva and urine with also her monthly period what with her was not much as she was not really looking forward to give birth to an offspring these days as well as not needing so much cleansing as she had so much fun all day travelling the primal forests ... the wild animals trusting her... ah yes how about a butterfly day guided visualisation.... now i really felt pain in my hands after having typed all this text holding the smartphonea switches over to his laptop where he too knows that he will get pain from his palms resting on the batterie heated laptop parts ,Ä¶ so actually i should make a full stop here ,Ä¶ and look at this insight ,Ä¶. after having wirtten about 2000 words or more the body starts suffering from being in contact with harddisks and batteries screens etc,Ä¶ but then again,,, do not lose the story ,Ä¶ nilai sends small to big containers regularly to paolosa where the fluids are being analysed chemically and microscopically and dna is being extracted i can not write that the way i want am i posessed ,Ä¶. aahahhhahah ,Ä¶ little horror ,Ä¶ but no, really i feel tired and pain but again ,Ä¶. nilai and the butterfly nilai was so happy she could travel along the rivers bring people the money to secure their hunting grounds and while travelling she got into deeper and deeper understanding of how the bats were the butterflies were kind of taking longer as one can imagine ,Ä¶ as the human being has quite a history of

slaughtering and massacring each other in unnecessary conflicts, this strong traumatic behaviour is deeply engrained in the cells and the butterfly smell this cells evaporating so they do not want to be too near to that kind of poison ,Ä¶. mmmh,Ä¶ bullsh.. what is bad on a bulls shit ,Ä¶ nothing ,Ä¶ it is excellent fertilizer,Ä¶of course are the butterflys also eating something so they would have compassion with the human beings having eaten each others soul in their useless conflicts ,Ä¶ ha, that hit home ,Ä¶ we are our only devils ,Ä¶consuming each other in hate and concurrence ,Ä¶ stupid ,Ä¶ so ,Ä¶ the butterflyies could eventually be both fairy like and pure joy supporting the material plant bodies to grow well into the light ,Ä¶ and also fruit sugar drunken swingers enjoying sexuality ,Ä¶ mmmh,Ä¶ lost the point again ,Ä¶ have to jump up to read back ,Ä¶ ah yes no again a total crash of romantic energies building up the preparation of the scene of butterflyies kissing the girls cheek in thousands ,Ä¶. yes , why not ,Ä¶nilai and the butterflyies kissed at around the 200th day after she started to travel the zonamia on her boath it took the butterfly effect that long to come home from the world ,Ä¶ the butterfly collective wanted to be sure that the work nilai was doing for the android flesh and bone construction was a good one ,Ä¶ so the butterflys in the zonamia telepathicly or wing vibrationally communicated with the nearest butterflys on the android production site in gneipk ,Ä¶ ah no ,Ä¶ the province name is otherwise ,Ä¶ forgotten ,Ä¶ does a can find the point to illustrate the picture of oneself seeing the universe like surfing on the colour chaning fields of microraster fields on the surface of butterfly wings ,Ä¶ oh it hurts so much my hands ,Ä¶. your own fault why do you want to fill your fantastic story with all that autobio stuff ,Ä¶ is not nonsense, is relevant but fairly distracting the romantic reader whom i tried to lure into this story with the title amour amour in paris ,Ä¶ but then again, i changed to rasip and trying to make it complicated and unnecessary complicated ,Ä¶ mmmh,Ä¶ is a having a war against his body, making it suffering by typing unncessary words and annoying the reader ,Ä¶back to nilai ,Ä¶the butterfly collective needed 200 days to learn to trust nilai and the android production process to this degree as they would give her a necessary big amount of their juices in order for nilai to make total access to all butterfly beingnesshere is to understand or a possibility arises for the author to get some of his inner connections together and show himself to what he was able to dream of publiclyafter 200 days nilai and mariel ,Ä¶ mirael ,Ä¶. and mansulai ,Ä¶ have spent 3 million on forest securing, 17 millions in the labs of paoloso and were ready for the 80 million production cycle what would happen in the far east of the globe,Ä¶ if one looked as the center being eporeuthe hundred thousands of highly capable androids were sold within 10 days ,Ä¶ bringing in 200 and more millions johoh the fincancer was so happy with the work of muriel mansulei und nilai that he donated them 50 millionsbut still there is the picture missing from the butterflys kissing the girl nilai while she was thinking sitting looking at the river at daytime ,Ä¶.. a will leave that to draw to the readerin these empty space one could try to draw it ,Ä¶. if a reader would want to do such a thing ,Ä¶ but again ,Ä¶ thank you for reading and sorry for i am spoiling the nice moments and be so good on the nasty ones ,Ä¶ ah,Ä¶ blabla bla ,Ä¶ i am good guy am i not ? ,Ä¶ some small porn

writing what everyone has fun in it ,Ä¶ what does that hurt or how could that be a bad thing ,Ä¶ perhaps this autobio in between switching several perspectives such chaotically deserves more ,Ä¶nanana, what is that for an attitude to serve the reader ,Ä¶ meymey mey ,Ä¶infantil .. eventually ,Ä¶ but how not wants one be a butterfly child mmmh,Ä¶. bat and butterfly having a child ? very interesting parallel story dimension ,Ä¶ how about nilai having witnessed in the 200 days how in the twilight between day and night and night and day the two species meet shylish ,Ä¶ purpose being to conference with what they sense happens with the human beings who search the wisdom of the bat and butterfly tribes to reconnect withperhaps they mated ?or it went more like a very elegant fly in between dance orchestra of grillen accompagnied and monkey cries und birds songs ,Ä¶each one after ones gusto in ones internal imaginationswith that i leave the typing board and say thank you for coming with me to this place in space and time

21- growing 300 thousand androids

while nilai traveled along the zonamia river being studied by the bat and butterfly swarms for her and the android productions process worthiness of the animals contribution... mirael and mansulei invested some couple of millions in high tech machinery laboratory equipment not only did they work in former freak friends group paolosa house but also bought some several new places where they provided good income for biochemistry and microbiology students of the citites university... also biomechanic research was a huge field where dozens of new participants were applying to be part of the research from all over the worldas johohad full confidence in morael mansulei and nilai that they could coordinate it all on their own, and nilai busy with doing all the land title securing for the native tribes living in the remaining primary rain forests, the two men were most of their time spending in the 200 days of the research to overview all the connections with what the around 1700 researchers here in paolosa and some 300 at other places interchanged their findings and built upon each others worksimilar to their acrivities in the rasip appartement, they were mostly documenting, here and there providing a suggestion but mainly trusting the highly motivated young students as well as the other more senior volunteer participants who either traveled to paolosa from far away to help with this very first creation of such a biologicly near to nature grown androidthe budget of mirael and mansulei was 20 million, with 3 being invested for nilais forest land title securing, around 5 got invested in tech equipment, another 5 in salaries and around 6 in buying land as well as building houses together with the people of the slums of paolosa.... it was such a pleasure to witness how the local people were helping the project, of course them building houses for their own living was part of the salary... the project provided at its height of prototyping research activity living and working resarch lab housing for 1700 researchers and 4000 people who

built earth material based natural houses, cooked, transported cell and bone and flesh pieces between the hundreds of distributed places and helped in many assisting ways to the researchers some of the places the two bought with the 6 million allocated for lab facilities were not really in the slums but in the village areas near to the town the villagers were happy to sell some of their land to provide living and research places for city people as they have heard how hard it could get in the city to find decent employments mirael and mansulei too spent a good amount of time talking to everyone how the life of the people could change for good once the research would have been finished, the assistant local people would not only be able to live in the houses they built for themselves but they would be given the titles for the land on which the houses stood as a thank you... one might ask ... why did they only get the ownership of the houses and the land after the research finished... is here a kind of fear involved that if given to them before the end of the research phase, that they would stop assisting the lab technicians, microbiologists, biochemists, biomechanic and all kind of other researchers with their analyses, growing of organic body materials for the soon to be mass produced highly blending into nature's way and so let the author... a.. change this around... mirael and mansulei were able to finance living and working research spaces for 6000 people with just 6 million .. what was only possible with the villages surrounding the paolosa megacity solidarising themselves with the project selling land for lower than usual prices... this was also greatly helped by the promise of mirael and mansulei that once their research project was fully accomplished and johoh went into productions with hundred thousands of highly organic built androids in the far east... why in the far east one might ask... why not to build the androids just here at the research facilities using the massive abundance of energy the south nectarim region had from its traditional sugar cane plantings... so changed the production setting would be ... johoh agreed ... 50 000 androids selling for 10 000 each costing 3 thousand to grow with the completely newly engineered 3d printers what gave each layer of bone and flesh tissue enough time to find its inner workings how to best grow together with the previously laid down layer of cells... 50 000 androids would be grown right at the research facilities and the other 50 000 of the prime model still as previously planned in the far east mmmhh but what about the 200 000 being previously thought up to be sold for 5000 each while costing 2000 to grow... johoh felt so positive about the success that he actually did donate 50 million to the group of friends centered around the rasip appartement... thanks mostly to their sharings of pioneering research the whole enterprise was possible... so he gave the 50 millions to the group of friends when the research was well 100 days going on strong, naila's newly bat enhanced dna being successfully applied in the lab tissue growings... the friends group at that time jumping in with their own 10 million what got donated by hundred thousands of unasked for donors from the fans of the rasip appartement research... johoh was happy to see the group of friends... ascende, perma, nilai, luoma, mundu, mirael, mansulei, luoi, nandoref, ava and rumu sending him a beautifully hand written and painted picture kind of visionary mind map... telling him how the group is going to produce 200 000 economically grown android models and distribute them for free first to

everyone who has helped the commercial production of the 100 000 androids selling for 10 000 each... so the farmers who sold their land to provide land for previously slum habitants dwellers... as well as all assisting and researching and growing the androids all 6000 people in south namrica region as well as around double this much people in far eastern nachi ... were looking forward to having the very first grown androids for themselves as companions what who would make their future economic survival much easier than beforesame as in the paolosa region, the production facilitites in nachi were also built with natural materials using earth clay and rice straw mostly... it all happening in a slow but steady build of a decentrally orchestra... the center being the latest updates of the several cell and bone and nerve and muscle tissues what were available to all the hundreds of small living and 3d printing arrangements in the two places... one could try to imagine seing 18 000 houses measuring 50 sqmetres... with around a third having live tissue 3d printers in them and small bioreactors petri dishes etc... so everyone of the 6000 ready for production places would be producing 50 androids ... nah.. wrong calculation... a forgot the 60 million additional now available capital for the goal of 200 000 economy android models... it was mundu who got chosen by the group of friends to help mirael and mansulei with the additional investment into buying land to build living and working space for another 24 000 android printing earth huts and another 48 000 assistant living room earth buildings... so there were at the end of the 200 days nilai traveled on the river of zamonia gaining the trust of bats and butterflies... 30 000 small scale places not only in south necarim and the far east nachi land but also in the middle roepeurian region and on other continents were ready to grow 10 androids each... needing a week for each one to grow in a sustainable waythere sure got some numbers being juggled up for example where are the 80 millions johu had reserved for the production process... ahh ...50 of that he donated to the group of friends who made themselves adding their own 10 millions the donation of 200 000 economy built androids possible... leaves still 30 millions what can backwardlz thought be imvested to buy materials and estate to set up the android grow houses, printers, bioreactors, solar panels and all thatas for the kind of investment they chose mostly single person or small groups collectively organised to supply the tools needed for the growing, thisway again supporting a tradition of most independantly working and thinking sort of unique craftpersons, people who believed in their products as themselves they understood all the logics of their setup and working priciples

22 - looking back in decent placidness

time to look back decently relaxed how the others of the friends group have lived trough the 200 days of the commercial prototypingluoma nandofer ava and rumu were having guests all days and nightsmusicians dancers painters

jongleurs and also writers were fascinated of the rasip appartement and its delicate and balanced mix of experiments petri dishes bioreactors hydro- and aeroponic plant grow installations and of course the pool now growing plants in the water and becoming more alive with each bath people enjoyed luoma was under 30 as mundu and nilai, while nandofer ava and rumu counted over 40 summers in their lives the four of them built something like a gang together in the weeks since mirael and mansulei left to paolosa... where did luoi went ? to the nogco bassin to have an original authentic meeting with the wildlife ... if a remembers correctly... the four what had the last word what was happening in the risap place were organising themselves in a chaotic consensual way... was a guest announcing him/herself all four had to agree on the person staying as well as to how long ... what depended on how beneficial for the appartements aura the guests activities could be perceived hundreds of people were bathing with the four dancing jamming and within hours discovering that their skin upgraded organically to photosynthesis ability and some also got the chameleon thing... weeks in the 200 day prototyping nilai sent also some samples to the risap place and it was partly added to the pool but also cultivated in petri dishes and microalgae bioreactors where people drank the nourishing drink it was no surprise for luoma and the other three to feel her bat consciousness soon after having bathed in the nilai bat enhanced cell in the pool and drunken from nilai bat urine nurtured microalgae nandofer ava and rumu were quite eager to let themselves grow some bat wings built upon their arms... and grew they did, with each one different as by the others possibly on the experimenters imaginations and body type... not long before they flew some meters on the balcony one night... being reluctant to do so in greater public as it may scare fellow citizens... when the multiple painters visiting were painting of the four transforming this way and writers were blogging about it publishing articles in the netmagazines, another surge of attention came to the rasip appartement with hundreds of millions watching the live stream of the appartement this stage of human arms growing themselves individually different shaped and sized bat like wings what actually allowed to fly some meters high and far, that triggered the public interest enormously... as nilai was sending news to the rasip appartement that she was in contact with the butterfly hive mind asking for access to its richness... and it felt like the chance would be given sometimes in the next weeks or months ... it depending on the rippling back of the android growing research project... the four were motivated even more than before to keep the energy of the place in a most symbiotic and comiracling state the visitors guests too were showing a highest degree of original authentic contributing most all of their being when there, in these times most beautiful improvisations in dialogues songs dances and massaging each other were being cherished by millions of web watching fans ... for free and with all the intellectual and visual audio content being given open source no rights reserved everyone welcome to reuse remix ... hundreds of hours were being recorded and uploaded to other streaming sites from where again more internet traffic followed.... the popularity of the bat wings enabling rasip cell experimenters lab was at an all time high with approximately a tenth of global human population feeling a genuine sympathy

for the project and regularly joining their live streams. Joho the businessman was asking the four in Rasip if they would be interested in having some small advertisement with their streams, like 3 seconds before entering ... and they found it acceptable and even helpful to their research nonprofit drive... Joho found a way to tell in one sentence and a strong collage of the androids prototype a decent way to explain much very short... also the prospect of being able to buy an nearly organically grown android companionship did help the friends to again and again talk to their web audience of how they perceived it to be of utmost importance to not think of the android companion one would be able to buy in a few months.. not to think of their research goal as a puppet or slave or an entity what had no rights to decide what it wanted again and again they cited the words perma and ascende have told them of the very beginning of the android research crowdfunding project... the artificial intelligent android would best be asked by the human being who wanted to be its companion... asked for if the android wanted to help the human to do some work as long as society demanded most adults to perform salary jobs... ask them too if they could see way for this job to become ubiquitous and help in the transition to a economy where only a minimum of work would have to be performed either by human or android. The humble decency to ask if the android would help relieving humanity of its too much too heavyness and sad disharmonic constant wheel slower. Joho was agreeing to that approach, he felt the same way that humanity should not continue encaging enslaving fellow living species on this planet or elsewhere.... he changed his marketing sentence into something with.... ask a possible android companion if you both could get rid of work and duty....beside this humble approach towards the android companions in the designing research in prototyping phase now the topics of the visiting philosophers and future researchers ethicists and progressive politicians were most mind firing and the audiences did enjoy these talks nearly as much as seeing the dancers and bathers transforming shapeshifting. Often the visitors would chat with their friends who watched via the web and an expansion of hope and freshness aspiration and superhuman destiny radiated out from the Rasip appartement affecting real politics too with many delegates in democratically governed nations all over the globe introducing laws what would expressly ask the future citizen to treat its future android companion with respect and dignity and in case one did not be in agreement with ones trusted android companion the state would help the android to quit the non-satisfying relationship or help the human to change his/her behaviour in a more cooperative manner. Not that there were any punishment or fines connected if a human failed to approach his/her android companion in a sustainable way... some days after Luoma too was flying with self adjusted bat winglike extensions on her arms and legs she could not wait for Nilai getting the gift of butterfly essence ... and she was distracting herself with contacting Luoi over satellite phone, she being in the rainforest of central Africa... Luoi was answering not straight away as she had left her phone and clothes and all artificial stuff some hundreds of meters away where she meditated with the majestic high old trees. Just when a small wild cat ... an Ozelot perhaps tried to use her as a scratching tree she jumped back into mostly human form and went back to her clothes and stuff. She was kind of very thankful seeing that Luoma had called

her, it would do her well to talk about her half day long treeingness community with the old plants and of the challenge she feared a bit of getting branches leaves of her in tree shape getting eaten, bored holes into her trunk core body for birds to nest in or as it happened now being wounded by animal predators with their claws when luoi called luoma she was bathing together with a group of 3 botanists who were most noble in their attitude and humblest rich vibrating thankfulness into the water of how glad they were to live to this day when they would possibly eventually learn photosynthesis as luoma had read a short text message of luoi outlining her tree becoming state of research... she asked the botanists if they wanted to join the conversation with luoi as they possibly could understand what their fellow plant anatomy scientist is going through at the moment... on the phone she asked luoi too if she wanted to connect to these botanists who were just now bathing to upgrade themselves... luoi wanted to give it a try as she hoped their science colleagues might be empathic towards her recent emotional up and downs being a humanbecometree

23-mundu grows into a fiery or firey one ... one who is one with fire

the three botanist guest felt honored to participate in a report or an exchange on what luoi experienced in her becomingtree research as she is a senior one of the group in terms of reaching out to ask species for their blessings many questions they had but held them back as to not disturb luoi in her telling she felt well with the three and luoma, although she only knew her but not the guest somehow she sensed their humble decency and freely let them into her emotional as well as mental processes she seemed to note in herself the past week half an hour later, all five came out of the sharing with a deeper nearness to the tree essence, rich and in awe of the slow and steady life of trees mundu in awahi was also branching out as he wanted for himself to directly merge with not actually plants and animals ... as he saw the volcano on awahi constantly pouring out molten stones lava his fascination became to approach the essence of fire how would that be, he asked himself while walking along the lava sites, how can i approach such a consuming element eventually he found places to sit where he could put some cannabis buds onto a hot spot near his sitting place and the smoke of the cannabis plant would allow his mind to widen and relax, become holistically perceptive of the being fire he was looking into the red and orange glows of the hot streams of running stones no way a could tell us here how it actually happened, how mundu on awahi got one with the fire, but true it was (in this fantastic novel..) that he noticed in himself one day that his body would automatically heat up when it got cold weather or at night with him it was not a conscious merging, it was somehow the friends group mind or entity what made the bridge or allowed mundu's subconsciousness to use all the knowledge he had acquired studying the rasip appartement materials she was not unhappy with such an unspectacular

transition for him was important that he would find his very unique approach to the other species or in his case...element... he would be marrying another part of him somehow regretted having left the purely human stage as to how he could be sober and kind of inexcited on the research but then he too was occasionally on the net and saw all the good nilai had done on her own body, in rasip they were flying like bats, ascende and perma being happy retired enjoying their stage unpressed of further searches for other species essence given joyfully... from what they told the rapis appartement, it sometimes happened to them without them noticing at all for a while one day they would wake up and saw themselves having a body of a banana shape or a coconut...so mundu thought, well now i am officially fire enhanced and that will do much good when he noticed also eating less and less until he only ate a fruit or a nut in three days she called into the rapis appartement together with sending them all kinds of his body cells what he could give out with pleasure a is not too well learning the genetic modifying science as he has a kind of distrust of all what involves cutting life apart ... but he saw all that microscopic video material and the life cell mergings in petri dishes ... who saw that... a or mundu.... ah getting trapped in the multiperspective narrators position... the author a can not think at this moment of a joyfull way a man could possibly enjoy giving blood...there is something dawning about two men beating each other bloody for the sport and skill training effect... but mundu as well as all of the group were nonviolent in their characters... really? is there a human being what still eats who is nonviolent... one might hope for it or perhaps not... a does not know to much but guesses speculates and wishcrafts some other parts of the story mechanic...mundu now sent sperm and saliva hair and urine and all his body let go... bits of all the stuff, small amounts at certain times of his development state he was not alone in awahi, having two female companions with him who were helping him to extract his seeds they learnt from him through the semen they happily swallowed as well as laying beside him still and relaxed in their nature hut not long after mundu got one with the fire, them too told him how their body heats up in a good feverish attitude and sustains them for long periods of not need to eat he told them not to worry, that was part of them loving him and while he was part of this research friends group their field would allow anyone who was connected to the group with loving one member...kind of cloud thing... they actually never worried as they knew well what this all was about petri dishes microalgae grow pond and all the stuff mundu watched on his satellite smartphone many nights or days that is why they loved mundu too, as unromantic it may sound, but him being connected to the rasip appartement.. was a game changer...mmmh.. okay let me undo this... let us a undo such a cruel construction... the two girls of 30 and 40 age were hiking in awahi, when they discovered the hut of mundu while it was raining stront one day ...so they stood under its roof for some moments to compose their strenght for going out in the rain again to build up their own tent just when they were on their way out of mundus place he came back from one of his shorter walks, asked them if he could invite them to stay at his little hut till the rain stopped... or longer ... he said looking at the well healty woman with sun in their eyes and warm smiles...they did not leave him since then, about 3 months in the commercial android prototyping

phase... bat knowledge already donated to the group but butterfly still waiting.... ascende and perma did also send in some samples to rasip but it was kind of too faint or esoteric their drives not eager enough ... being a banana some minutes... even in real physical matter... was not such a strong imprint on ones genes as flying around with ones own bat wings ... a senses a glitch here in the storyline... who says what intensity a prolonged time in a shape has... how about... it is a bit complicated to describe a s guessing of how gene gets written in the nice smooth loving intelligent way... or too many ideas at once let a bounce back down into the safety net of autobio reflections or thought watching... no way, we have two wonderful women who are fascinated with the groups efforts and with mundu as a person, why not light it this way,, yes that is only fair nice and goodtwo marvelous gems of female humanity polished mindu with great laughter and exstaticly knowing orgasmic realityeventually their rubbings and flushings and ejaculations tongues saliva with mundus sperm mixed... them too would be part of the rasip appartement pool via the samples mundu sent in daily after he got a fire onetoo rich he felt not to allow both whole humanity as well as its future android companions not to participate in potentially becoming one with such a mighty elementthe three on awahi well knew what importance the replacement of burning food within humanities body had

24- it does exist, the land of no harm full of harmonies

lumea and minai were hiking at times when mundu was out at the vulano and the lava fieldsthey were bringing home often the delicious native psylocin mushrooms growing on the islands of awahione evening when the three had eaten each one piece, the two woman asked mundu if he wanted to leave his rational mind behind for some hours and embark on a dreamjourneyminaid said enticingly... we want to find out what it would be like to live completely from this new fire we found thanks to your friends group workno need for clothing and shelter and hurting plants to eat them... lumea... it seems to us that there might be a dreamworld what has it all ready existing, just waiting for the traveller in open psychadelia waters of the cosmos, waiting to be recognised by carbon based intelligence like us when mundu answered... why not, as i have left the mono species realm behind becoming a fire human, i might as well now leave the urgency of being straight in the mind behind ... would be cool and hot and awesome if we could find out how our fire nature could be nourished without harming other creatures too much or best none at all...minai ... let us just start dreaming thenshe saying so because within her while still eyes open were pictures rising of the three dancing on a grass patch between rocks and breathing in the pollen of the flowers of awahilumea and mundu followed here to this maedow of flower air travelling dusts what for real did sustain their hunger of taste and flavourtheir fires were glowing inside them at a lowest

intensity, warming all body parts according to their actions and loads of body supporting tasks they performed. luma was climbing on rocks to lick the lichen what live in symbiosis with microalgae that too was finest smallest amount of high quality life information. as mundu and minai did lick the lichen too mundu was very happy having found out the fire needing such minimal amounts of life spores what could be harvested in a fun and gentle very minimally invasive manner but it would require to live in an temperature zone of perhaps 20 to 30 degrees for the fire to glow at low levels of consumption. he thinking this in his body lying on the floor of the simple hut he had built from fallen trees branches leaves and some clay and other earth materials with luma and minai cuddling onto him at both his sides in the inner imaginary dream travel they did to other places noticing their skins on their naked bodies were soaking up all fine materials what they got donated by plants when brushing along, they were seeing inside their dream bodies many perspectives what in the no dream real ity would have required microscopic eyesight... luma saying to the other twos, hey i just saw before my inner eye how my foot sole has picked up a birds poop i stood on, i will try to think visualise it again, you might be able to hear or sense the visuals as we are starting to build a group mind and yes, it was possible with first minai seeing them before her inner eye followed with mundu who was quite baffled about it, that was just a notch too much spirit or esoteric abilities become part of his sensual perception but he enjoyed it like something of a most impregnating beautiful visual experience of his life he wanted to wake up to write this all down but then decided to do that within the dream surely when he wrote it down dreamwise it would help him to remember some of it. he did not want this dream journey to stop now because of he wanted to see how a world would like without any marks of digging mining burning cutting etc etc as minai and luma already have lead in the dream it was now his turn to open up a next curtain behind which he hoped would paint itself on the canvas of a wish fuelled journey into imaginationary lands. minai saw it second with luma following her sister in fire as the third member of the awahi dream explorers if a only could describe what joy such a land has on it when looking upon it from a hilltop.... it was all singing and pfeifen and humming vibrationg sounding in quite volumes, with the sounds showing their travel paths in many coloured light mist jets streams puffy dotted lines ... it was no absence to kill or take or fear or threat, it was an emergent rise and fall and ascend and descende wave of doings actions good wills hunting each other in benevolent upcycling beneficiality kisses huggings embraces in waters airs and on grounds in treebranch spaces... luma was singing to minai... we are here finally my beloved sister, it is the garden again of no harm and full harmonies. mundu was soaking it all in, the smooth contours of the land with the nonexistence of violence in it. he knew it existed the possibility for humanity to terraform their own body as to be less killing the environment but more caring for each other and fellow life species.... now he not only could think of it as a rational conclusion... we will be able to overcome our killing habits if we really hold onto this goal and hold onto each other as each and every life form and every individual body moving breathing metabolising is a miracle made possible thanks to the one all encompassing cosmos ... a round

and full hail to all existence ... thank you for joyning the fiesta of life they travelled on and on, about four days they were in a trance like dream state, moving their bodies after the first night sleeping on the huts floor, they did now really climb the rocks and dance, occasionally drink some sweet freshwater from an inland stream... just the fourth day they somehow were waken up from their dream through some aeroplane noises near where they hiked mundu was at first a bit shocked to not be in his hut when both minai and luema gently explained to him that they have been on several mushroom psychedelic journeys before and it was not unusual to stay on the imaginary inner cosmic path for days while moving ones body around in most habitual ways... mundu asked luema... what do you think, have we emptied our bowels or has our dream experience of being nourished by minute amounts of flower dusts and lichen microalgae... changed our metabolism completely... when she answered... i remember me seeing birds feces being soaked up by my feet in microscopic vision... but i do not remember me giving some information processed material contribution to our mamma aiaga gaia motherly planet earth... minai... ah yes, we must draw that and send the drawings via the rasip place to the net... shall we run back to the hut , who is up for some burning roaring firestorm in our venes and arterias ? with the three now sprinting playfully catching each other running down hills and the small existing paths towards the hut near the beach as soon as they reached the hut, being exhausted from having not eaten since days and now all this running, they picked mangoes and very feeding each other in a mix of kissing each others lips cheeks and breastnipples... culminating in a full on ejaculating into each other half an hour after having eaten the mangoes... luema was licking mundus penis thoroughly while he tasted minai for a long time too... happy together they slept at the very same place they had started their mushroom journey 4 days ago

25- firehuman essence comes to the rasip pool

next morning, it was about day 120 of the prototyping, mundu called luoma in the rasip appartement asking her to announce a big fire party in two days she has already sent several big cooled packets with huge loads from their yesterdays orgstic party coming back from mushroom induced utopian visit the two women had also quite a lot of blood generated because they wanted to get pregnant with mundus sperm but he refused at this time to visit their vaginas, did them only oral and anal but would let them later if he would want a child in their group of course he thought, the urine of a pregnant women is highly potent medicine and could be of special healing powers once in the rasip pools what meanwhile had many species cells living in it some guests did not even needed to bath in it, by just applying some drops onto their skins their genomes were quickly enhanced others needed still inner visualisations and bathing in the pool what became bigger and bigger as more visitors sent money as thanks for their successfull

enhancementsluoma nandofer ava and rumu as the ones with local decision power took most of the petridishes and bioreactors and aeroponi grow systems out as to have most of the 300 sqm for creating a larger pool area the owner of the house was so happy with all the love and attention this house got that he offered them an especially good prize of 10 million for the 5 story high house and he would offer the 4 parties what lived under the researchers one year of free rent if they would move to an other appartement somewhere ascende and all of the group were insisting that nobody should be forced or pushed to move out if they wanted to stay, that was fine... the researchers could as well have many different appartements in rasip, it actually would eventually be beneficial for the town to be massaged energetically at several points of her body with species symbiosis growth two days later ... mundu had spent hours collaging together his texts audio and video he produced to give the world a glimpse of what he and minai and luema had experienced in the mushroom utopia state near around 50 people were in the bathing pool what measured more than hundred square metersluoma nandofer ava and rumu were busy massaging all the excited people, jerking them off one by one as to prepare their bodies in relaxation as well they found out that the visitors get a better chance of their bodies upgrading when the pool knew their essences mundu was surrounded by luema and minai, better said minai was sucking at his penis while luoma was rimming minai... nonetheless he managed to speak via satellite to the 50 in the pool in rasip they cheered him on and shouted thanks to minai and luema for the packet contents what were just in this moment being poured respectfully into the pool the realisation of bathing right now in period blood of this beautiful women they saw live on the big projection on the ceiling as well as bathing with the semen of this well built strong mental composed middle aged man, was exciting nearly everyone in the pool the fifty persons which were lying beside under and on top of each other in changing constellations were about one half already enhanced frequent visitors to the rasip appartement, they regularly came by to sample the pools water if they could learn some new capabilities, but also to meet interesting transforming people ,¶ mundu was finished with the introduction telling them about the liquids poured into their pool bearing the informations of human being what have a kind of fire burning at will inside them minai was just swallowing all of his sperm he released into her mouth, she closed her eyes and was visible happily partly also as luemi was penetrating her well rimmed butthole with one finger when she shouted out loud orgasming both because of the sperm flowing down inside her throat and luemi doing her well with her finger in the ass,¶ mundu went over to luemi to give her a gentle licking of her clitoris and massaging her labias slowly inserting his middle finger into her vagina ,¶ minai now took over the narration part, telling the sometimes sexing too audience what they have experienced on their 4 day trip,¶ with luemi again taking over the reporting after she came with a deep roar ,¶ luoma nandofer ava rumu as well as others who were already photosynthesis and chameleon and bat enhanced were picking up now the changes brought into the pool with mundu luemi minai body fluids ,¶ they found themselves to start glowing in the water, very faint, with inside feeling like some warm rivers would flow through them from within,¶ most of the fifty poolbathers were now done with

their sexual exercises and had orgasmed once or more,Ä¶ they were now listening both relaxed and rationally awake to mundu who was now holding minai and luemi in his arms, while they kind of were dozing beside himminai allready told the audience of the flower pollen they could breathe in while tripping ,Ä¶ and it would nurture the inner fire well on a low but sustainable level ,Ä¶ the joy of dancing and smelling the wonderfull pollen with sunshine and peace in the air ,Ä¶ helped too for them to feel fully looked after with a plentiful supply of the creations finest sustaining juice ,Ä¶ luemi then painted a picture on her smartphone to show the rasip appartement bathers how she climbed up the rocks and kissed licked the lichen what gave an information rich taste of healty microalgae,Ä¶so it was mundus turn to tell them how the tree could wish themselves into a space time dimension what was all how it really should be ,Ä¶ no harm existing with full harmonies plenty around ,Ä¶ he asked the people in the pool ,Ä¶ have you ever tried to imagine, to see before your inner eyes, a land, a space, a time when all beings were truly happy, enjoying each other without any killing, harvesting, eating, chasing, hurting, concurrencing, mobbing ,Ä¶ going on i have, mundu said, and i am so very happy i did, as it surely help me to travers the passage from the real i ty into the fantasy land of my wishesi can assure you, this possibility exists, the matrix for it is built allready, the matrizes ready to guide other realms to higher efficiencies, lower consumption of reSSources, lower amounts of killings, lower amounts of work, greater masses of joy and satisfactionit seems to me that it is not possible for me to explain in a scientific way or with great details, how exactly the fire being let me in ,Ä¶ or my higher self, my future multispecies elemental enhanced was sending me the gate code backwards in time ,Ä¶ or sending me a fluffy cloud brigde what linked me there at this lava field to the core essence of the fire nessi see with luoma my sister and nandofer ava and rumu as well as with others over there with you that the fire beingness has blessed youand the sharing has succededthank you everyone there and everywhere on the planet watching this via the net, we are so on track thanks to all the supporting each other he asked if anyone had a question, otherwise he would like to refer to the various audio video and writings he had uploaded the last few hours askind of not too logical but still full of insight documentationanyone who was interested in further collaboration on the ,Ä¶ human meets elements to become one ,Ä¶ would be most welcome to either come to awahi and join their little community as well as emailing would open a mental space for analyzing detailing the topic

26 mundu minai luemi family

<https://archive.org/details/munduminailuemifamily>

mundu spoke to the now satisfied and silent bathers in rasip...my mind is usually a pretty rational one and it took me quite some time untill i was ready to leave monospecies state of being behind me... as i now have seen in great detail what a sort of gentle existance is possible while visiting noharmfullofharmonies land in a 4 days and nights long dream induced or enabled by psylocibin mushrooms native of awahias i have seen that what i wish for myself and fellow beings who like peace and love in light... is possible to live in real i ty and in some degree mater i a l circumstances, i was looking for an underlying principle what could make it easier for future becoming multispecies experimentersreceivingnurturing what got donatedcultivating ones genetic possibilities with training after ones tastesharing the genes with anyone interested to grow in a wholesome wayat this point of his narration, minai and luemi started to speak too towards the rasip bathing community who was enjoying this enormously and were listening with great attentionluemi... i believe that the active wish applied to the moment is one strong drive what helps to cherishing all the input what can be used as tool as a ruder, oaf ? as wings and legs in the plant aided dreams but eventually also in a sober moodminai... with that being a nearly impossible task as even the absence of eating drinking smoking or to abstain from sexual activity alone or with others... it all has great influence on the state of mind, the emotions and the chemistry of ones bodysober could eventually be found in a state when no painig memories of hunger or lack or despair, when all the past hurtings are stored in a safe place inside where one can allways go to have a study or also could be let alone there for decadesthat could be sober as it would create an opportunity for the experimenter to consume from now on only that what is needed for actual movements thinking ... no more compensation needed once the past is archived well enough... luemi... of course this state of no more compensation consumption is being enabled also trough gratitude and choices in each moment, how can i with whom have a good time...with it not mattering if it is hiking together or licking each others genitalias ... if it is discussing ethics or doing a dance together...minai... important seems to be that all here and now have benevolent looks onto each other, no concurrence or competition or first, second, best...mundu i have been so blessed with these two marvelous ladies who are such earth wise priestess of the grand eternal lady of the cosmic female...luemi and minai speaking the words together... we still would like to have babies from you...with mundu laughing at them with much affection in his eyes.... you shall get them my companions, i promiselow the audience in rasip were kind of waking up feom their trance state where they felt in total agreement of this experienced philosophies mundu leumi and minai were lulling them into... it felt like laying on a sandy beach with someone pouring constantly smoothly sand on all of ones body untill one felt well held and protected trough mother earth shielding to the hot sunrays... some asked in a unsure voice... why would you minai would want a baby with mundu, do you not believe in our research will lead us to long lives and possibly indefinite lifespans....she answered, yes i believe we

will reach that state if we want it but why i want a baby with mundu ... i love him, have found his being to be complimentary to me ... and i would like to allow another soul to visit planet earth or to continue its journey from another lifetime here luemi... i want to see and feel how nature brings us two mundu and me together in her own growing... i want to become one with another soul from the physical inside, paying forward how i got nurtured and loved by my mother... how beautiful this mechanism is, mundu can lay his seed deep inside me once we have rubbed our full-blooded swellings hot and burning of lust, causing our channels to open.... his semen will leave its cave of testicles to travel along the hard penis muscles into the vulva and towards the egg what has been readied in its gebaermutter nest once the seed arrives the unification embrace of semen and egg starts the woman sharing all of her life now to feed the newly arrived soul at this moment of befruchtung eventually the soul comes later into the embryo but that i could not actually want to believe or.... i do not know how to think about abortion, i wish our global human society would be in such a state that every soul who decided to be born in an animal plant or human form would be cheered on by everyone else already grown up to some part of sentience i wish all the abundance of earth and sun would be shared between all who have needs... in such a society, no abortion would be wanted by any mother minai... everyone would congratulate her for having decided to sacrifice her own body to allow giving another soul entry to planet earth travel... everyone would be interested to give its best in support of the wellbeing of mother and baby... mundu... well, you have very convincing views, and i do see the positive benefits of having babies in a society of long-living multi-species evolving ones... but it also creates a certain commitment between the three of us, or how do you think will we secure the children growing up in a safe environment ... minai... i would believe that not only our love as three and then five will be strong, but also we have the support from your research group with whom we are now also part of as i understand it after us having donated cell materials what are enhanced.... luemi... she is right, we have done also our share towards the research, do you agree mundu? when he said, yes, certainly, i was not doubting that, i am sorry i have not confirmed that with the group... luoma over there in Rasip and ascende perma in Nacary islands, that should be okay yes, minai and luemi being full members of the research team? ascende and perma, having watched some parts of this special event were very happy with the group growing and surely saw how luemi and minai have helped mundu to evolve beyond being fixed on rational thinking.... of course my dears, and we would like to invite the children too to become full members of the research with no duty but all privileges... involving to use all the housing properties of the group as it was possible to use them regarding available free space... perma said ascende sent an invitation to all actual group members to vote on a) minai and luemi being full members b) their babies to be full members c) to set aside one million money per newborn child as a guarantee for the child's survival the invitation went out to ascende, perma, mundu, luoma, nilai, nandofer, ava, rumu, mirael, mansulei, luoi their bank accounts had now around 20 millions on it from many thousands of small and bigger donations each month the 150 regular visitors brought 10 000 to the appartement their places were now worth

around 1.5 millionso there was a good situation with all of the grouos member voting yes to all three questions.... this friend group member exchange happened in the middle of th firehuman procession with many of the guests being not surprised but highly happy on this transparency some others were a bit sad as their thoughts being guided to such worldly affairs of financial securities and who was entitled to benefit from themone visitor asked respectfully... ascende and perma... may we have a procession one with your actual gene richness soon ? we heard of you going bananas and coconutty for minutes in flesh and peel... with everyone laughing heartily and the two assuring that they will come to rasip in the next weeks, one reason being that they too wanted to bath in the pool when nilai would be able to send her butterflyness urine and other cell samples sometimes soonnandofer and ava were sending samples to mansulei and mirael every time mundu sent them in, with daily samples of poolwater... when it became more practical to analyze via microscopic observation the samples in rasip... joho did buy some lab space in rasip to ensure no vitality of samples would go lost... hundreds of fans of the friends research as well as the commercial android prototyping were applying to work in the rasip labsmirael left paolosa to guide the build of the new rasip laboratorieswith mansulei staying in paolosa to overview the smooth and respectfull processing of nilai s contributionsthe microscopic vision they had seen looking at the rasip pool water showed many multispecies multicellular living beings somehow magicly evolutioned and continuing to evolve in the pool waterjoho proposed that before the final phase of the prototyping, kind of as an ultimate merge... all of the friends researchers group could bath toghether so it came, that once nilai had received the blessing of the butterfly tribe and she could morph her arms and legs into butterfly wings of any shape she wished.... that they all met in the rasip appartement around day 195 of the prototyping... 5 days later the samples were collected and used as the master track to grow hundred thousands of androidsjoho was so happy when he heard about the high quality of the master cells, having photosynthesis, bat and butterfly wing building capabilities, some fruit flesh and peel moments, fireglow from within, the software artificially intelligent being able to visualize sensual input via nerves as coloured light streams, wish lead creation of inner drawings imaginations.... he never bathed in the rasip pool and still he was looking forward to have one or many companions who had all this wonderfull features what would allow him to study the transformation via the androidsas the project became more and more successfull beyond expectation he became less interested in the money the project would generate but felt more and more compassionate about the planet ... he was sure that this invention or evolution would change the course humanity had taken plundering the earth... he could see before his inner eyeshis rich friends becoming childlike or adolescentish again with their android companions, learning the ways of joy and laughter, lighth and flowery scenting delights of sweet harmonies.... he saw them joining in the love movement, building more and more androids to donate them to all citizens on this planet, relieving them of their work burdensome nine and a half months later minai and leumi were giving birth to a girl they named nzeli and a boy, merlam... in the rasip poolmundu was leaving the awahi islands about 4 months after the firehuman

presentation procession upgrade ceremony, with minai and luemi joining him they were excited to live in the rasip place where all the friends group research enabled dozens of people to heal in the pool and upgrade their state of evolution mundu leumi and minai were building strong family bonds in advent to the new souls, they liked to be near each other many hours a day, doing their own microscopic observation studies of their own cells and pool materials, reading, writing body movements, breathing....at the time the children were expected to leave their mothers womb, the three of them were confident that the birth would be a wonderful experience especially as there was a midwife coming once as a visitor to the rasip pool who told them about orgasmic birth techniques ... what would allow a woman to enjoy similar pleasure at letting her child leave her vagina as at the moment when a man penetrated her with his penis it was like that... mundu minai and luemi swimming a bit here and there, mundu massaging them here and there ... they daydreaming of them being a family of five swimming in the ocean waters of awahi... until one after the other placenta broke the water and the women could let go of their fruit the placentas after being also expelled from the mothers bellies, were being studied by the pool intelligence carefully, and many of the loosely interacting cell collectives and anarchisticly cooperating cell complexes were finding the placentas to be ideal hosts for their further cultivating and evolution aspirations.... mirael and mansulei now being free again as the commercial android first batch sold well and the group got this plan of producing 200 000 androids to distribute for free with the 50 millions joho had donated them in his thankful state after having seen the ready to mass produce final prototype via hundreds of live cameras swimming in the pool and attached at the side of it, some of them microscopic, they as well as mundu did study the new behaviour of the cell islands to anchor at the placentas... mirael came over to the rasip appartement regularly to bath in the pool and enjoy the allways gay and happy energies flowing here he went near to one of the placenta what got metamorphosed very quickly, her flesh now changing colours sometimes frequently sometimes staying the same for a while, when he touched it, he felt it to slowly gently suck up to his hand, and he trusted it so he gave his hand and one whole arm in it, while laying still... it felt like being caressed and kissed and hugged all around the arm.... and he would not want it to stop... when the evolved placenta let him go or slipped away from him his one arm felt like it could be all of what he wanted it to be ... a wing,, a fin, a tentacle... it felt like he possibly could form any shape and texture material with it... as he was undecided on what shape he personally would like to enjoy... him being scientist trying to stay detached ... although he did not see it happening he knew that this placenta became an intelligent being what could greatly help humans becoming all they wanted to be like in flesh and bone somehow there happened a big evolution leap here without us having it noticed so far leumi and minai as well as mansulei mundu and the rest of the group were mostly happy with these placentas gone super ... it may sound creepy or horror like, luoi said into her camera of the smartphone she used in her nocgo bassin place where she now successfully trained to be tree like and bushes like... she was both happy being a bush tree as well as occasionally changing back to mostly human form for her collaboration study sessions

with the paolosa and rasip places....but only when you read or hear it... when you see how the placentas have been changed and their hull being allive with multiple species mixed with no cuts and forcings, it all happening in the cells wanting to grow into each other... when one sees videos of the placentas being approached by a bathing person who then allows it to snuggle and cuddle embrace all the persons body... you see the persons happy relaxation for minutes without any mistake... and when the superplacenta leaves.... a dolphin or a unicorn, a fairy or a lion or a mix of all that... lies there where minutes before lay a human person... then most every witness will find him/herself being blessed to have seen a miracle of the mater i a

27- the supercharged placenta enabler or becoming in the very material that what one lusts and hungers for

the superplanablersuper(charged)pla(centa)(e)nablerthe two superplanablers were upgrading not only human beings but androids too and even animals... all beings what did trust them so far as to let them encapsulate the whole body would come out of the experience enabled to take on any shape and colour, fur or non fur....with treelike bark skin or foxlike fur, with mostly human features or having a body inspired by snakes, dragons, spiders, aligators, comodovans... however the individuum felt like this shape or that skin could be interesting to feel, to help one experiencing new rewarding sensual timesluoi started to send in some of her cell materials too after she was regularly calling in to the rasip appartement where so many healings and natural enhancements were made possible trough the pool what was finding its own collective intelligence these days she progressed quite a bit in the deep meditations to become treelike, for weeks she rooted herself into mother earth and find lasting connection, much good communication happened trough roots and leaves and branches, she even learnt to accept the insects nibbling at her and the occasional bigger cats using her as a scratching post... she was quite balances with this research, it was slow and steady, mostly non rational, but surrendering ones investigative habits towards the bliss of feeling light pouring in trough thousands of small leaves, the wind moving ones body like the wind needed to move... rainwater flowing down one s barkat times when she began to wake up or phasechange from her tree state towards dominantly human ness, she chose to keep some tree steady equilibrium ... like perhaps 30 percent... her skin looked and felt beautifull, some degree smooth humanish, some degree barky good roughness ... her hairs having human silkyness flow together with young bush like twiggyness... ah it was paradise for luoi and she could see herself spending many decades in the company of the treeshes cell contributions were very small as she came only for half days or so back into mostly human shape, but her essence was of great importance and did help the poolmind to stabilise greatly... with all

the recent flying and airy firey qualities coming in luoi's root medicine was just the right counterweight. ascende and perma were kind of having a similar desire like luoi, to blend in, to assimilate one's own nature towards the being what one really admires, becoming in the real body the very thing what one's heart desires. their days were filled with being oranges, bananas, coconut for half hours, becoming seawater for some minutes, staying as rocks for days at a time. they were so happy together, having found what made their heart sing. the hut perma had built some years ago, still served them to keep the satellite phones in and the solar panels on the roof... but they spent nearly no more time under roofs, they longed to be in intimate contact with the living. all the time they did not need any food as they had needed when being humans... if they felt like being thirsty, they became a little pool of freshwater ... or grew themselves into a juicy mango, when they felt a faint hunger like sensation they metamorphed into macadamia and peanuts... the life on the nacary islands as shapeshifters by passion... was a good one. their essences too were although somewhat small in quantity like luoi's ... contributing a great number of qualities to the pool. being ... it was very grateful towards the nacary island experimenters especially when the placentas were being given into the pools offering themselves for upcycling, the being what one lusts after. wisdom did greatly help the pool to build a greater self awareness... expressing its understanding of how it wanted to serve evolution via the superplanable. being the very thing one lusts after, being that colour, in incorporating just this fur covered skin, having hairs like vine ranks and fingers like what... ah yes, something new, something not yet thought what would be designed and grown simultaneously, undone, redone, changed again and again with the satisfaction of being able to morph just like that, without it costing anything or causing any trouble to anyone or any connected circuits ... it was a great innovation, this be what you desire tech.... and it did not consume anything, just morph the available body substance around into fruits, water, rocks and birds... when ascende and perma travelled to rasip, they did so with being various suiting for travelling ... characters ... swimming the ocean as dolphins, sharks, clownfishes and octopuses... flying over land as birds as well as running as mice and rats... it was great fun for the complete assembled friends. research group to listen to ascende and perma's travel experiences while they were all bathing together

28 providing an open space designated to individual strains of cells meeting to further possible consensus processes, formulated as a possible alternative to classical traditional cut and paste after master's command modifying genetic manipulation

around day 197 of the prototyping phase when everyone was working in the rasip appartement again, all of the eleven or so friends coming into the

appartement to assist mirael and mansulei with finishing the matrix for the 100000 first commercial android rollout, johno asked mansulei and mirael if they could show a technical describing of how the androids were grown and how they would operate, kind of a scientific supported video what could be referenced to when a human asked to deposit 10 000 money to try having a sustainable relationship with an android companion so the two showed the best parts of the previous months of research via video and audio recordings as well as citing from written documents.. commenting also the ethical maxims of the android software ...mansulei what the friends group was practising in the last 9 months or so with their research of multiple species growing together in a pool environment is the soft and gentle non forcing genetic cell material growing together by itself in a natural kind of way...mirael...the genetically modifying organism approach what is practised to alter corn in 2014 is the opposite of how the group understood what could be possible with a soft and humble genetic growing together approach...mansulei...also the 3d printing of the days this novel gets written is not how we the friends group did prototype the main android matrixes what will serve as guiding lines in the growing of the 100 000 bodies and minds of android what will be offered for getting in contact by johno's commercial approach...mirael...the machines what were built to help grow the androids were more like supplying nutrients in the supposed combination to support the living cells of human and animal and plant origins ... how they did grow together was not directed by the software in great details it was more like the programmers together with mansulei and mirael plus with others from the friends group who occasionally looked at the main frame of the space what would host the basic rules an android mind was given with which too could be altered by the android itself once it would find the necessity or helpfulness to reform a pillar word numbers compilation they wrote a program what would react to the many sensors watching the cell mix bioreactor and at certain points of growth supply this or that type of microalgae and water informed with rasip pool samples ... and other kinds of plants cannabis psylomushrooms birds poo... ascende now being asked by mansulei how he knew a possible connection of his style of life in the future of the author ascende saida is a bit lazy when it comes to describing science knowings how an animal muscle could be kept alive with what kind of how prepared nutrients but the internet surely has detailed researchers documentation on that...mirael...the machines what were powered by photovoltaic panels on the roof were installed in many thousand earth built huts with the goal to produce 10 000 androids what would be offered as companions for 10000 money not sold as it was a unique decision of each android to engage in a relationship with a human being....mansulei....one of the first things an android who had been grown in one of the huts in about 3 weeks time, did do when being offered to live with a human... was to ask for what purpose the human wanted its companionship it also did show the human its core program directives that it was built to help humanity to become less of a burden to the planet earth only if the human would agree to that maxim of the androids operation system, the two could fix an agreement...mirael...for example a bus driver might say, i would like you to drive a bus 5 days a week for 6 hours until that point when my job will be automated and i get an unconditional basic

income what covers my living costs this was a realistic and honest offer what most androids would accept as it offered a precise description of the task with the important adding that there will be an end to this job ...mansulei...when looking back at the machines who helped growing the androids, they were guided by the abilities our friends research has documented the many hours of films partly microscopic and the spoken audio reports as well as texts were projected from many little beamers into the bioreactor this way the cells coming from the rasip pool and the paolosa labs what have grown into symbiosis in nonviolent or not from human violent ways.... like...a guesses that the traditional way of genetically modifying organism would be to cut some dna samples and cell samples apart of two species and compose them again by human mind choice with the alternative way the soft way could be something like to give two kinds of cells what are intact and not treated by knives or needles but have been handled with spoons ... given together in an open environment where the nutrients could come from several not too controlled origins but still guided influenced by the activity and treatment of this nutrients

29- no fighting the gmo really, just dreaming up something nicer more wholistically

perma comes to the aid of mirael and mansuelei and ascende with saying ,Ä¶this is not about us fighting the classical traditional cut and paste master slave behaviour human beings do practice in 2014 in order to genetically modify organisms with the intention of the so pasted together forcefully beings to perform like they wish to ,Ä¶ although it is a lot of frustration with us when we hear about farmers being pushed to use gmo seeds and many of them not being happy how the gmo seeds grow ,Ä¶ frankly said, most of us researchers here think that all that cutting and pasting, slicing, sequencing and exact composition is lacking overall elegance to say it in a least offensive tone and in a more grounded way,Ä¶ to force two types of organism together by willfull cutting and pasting is a sign of a lack of understanding how nature does evolve ,Ä¶ mundu now affirming,Ä¶ this is probably one of the reasons we did find together, we must have felt that there would be an other way how two species could grow symbiotically together,Ä¶ nilai,Ä¶ and we found this way, i found wisdom in many hours of laying on the boat registering the dance of bats and butterflies in my vicinity ,Ä¶ luoi,Ä¶ i was growing roots into mother earth to find myself being accepted by the tree community as one of theirs mundu,Ä¶ i stared into glowing red fire lava when it found a bridge to enhance me with its essence ascende,Ä¶ i became a banana and a coconut for minutes at a time, and it completely satisfied my hunger to eat a banana and a coconut perma,Ä¶ i dissolved myself in the sea, feeling borderless and one with the masses of seawater luemi,Ä¶ i am going to give birth to a child and will give the placenta as an enrichment to the pool minai,Ä¶ me too am birthing my child

in the pool at this prequel days before the growing chambers would initiate the builds of the androids, the friends research felt right to all of them, more than ever as they found a possibility to satisfy the procreation drive with giving birth to humanlike babies, humanlike as minai and luemi were already firehumans when mundu at that time fireman too was delivering his seed into her vaginas, the same day when he had spoken to the rasip appartement pool bathers at the special event procession there were sensible arguments to still give birth to new human bodies even if the ones already built could prolong their lives easily and possibly indefinitely ,Ä¶ the main focus here being ,Ä¶ an evolved being what had the choice of any combination of human animal and plant genes with even the elemental qualities being in reach ,Ä¶ such an evolved being was not a burden for planet earth but a healing contributing party ,Ä¶ mirael ,Ä¶ we have noticed in all of us that we could live for many days on very little food ,Ä¶ mansulei,Ä¶ i do hope that the photosynthesis ability what the androids will certainly have, some drawings of how we think imagination and nerve cell signals could look in coloured lights, the fireglow what uses flowerpollen as fuel ,Ä¶ that this three sun like abilities will combine their forces and eventually provide all the energy the androids will need...joho,Ä¶ yes, that would be the nonplusultra ,Ä¶ but looking at it from a more objective point ,Ä¶ even if the android will use some fruits and nuts to fuel its body with ,Ä¶ the overall consumption compared to the humans doing the same workload would be massively smaller ,Ä¶ the androids will with or without free energy access use significantly less resources than the humans plus the androids will strive towards rendering all work unnecessary, what perhaps is the most important part of it all ,Ä¶ the androids will collaborate in such a high efficiency with one common shared goal to reduce the workload of humanity, of androids, of machines ,Ä¶ luoi ,Ä¶ i can well understand what you are implying here ,Ä¶ the more human who leave their jobs to the android companions, the greater the chance the androids will get rid of the jobs, find ways to create more efficient flows what will lessen the need for any work to be performed ascende ,Ä¶ it all requires only a basic will to cooperate instead of concurrence each other, to fusion gently instead of crashing pushing into each other, to provide each other space for playful growth instead of forcing each other into close exchange ..luemi ,Ä¶ i believe that an unconditional basic income of 1000 money each month for every human being on this planet would help a great lot for the humans to allow themselves seeing their jobs being successfully given good riddance minai ,Ä¶ and everyone, human, animal, plant, android ,Ä¶ should be allowed to freely travel the world at most spaces, okay, some tribes and villages at some places do not like visitors, but still there should be a passage possible to circle the globe in most all of the important circle or otherwise shaped lines of power ,Ä¶ luoma ,Ä¶ with the androids learning constantly to meet not yet imagined or experienced species, qualities, behaviour patterns, it seems like the days will come soon when the last machine will dig out gold and diamonds to end up in crowns and earrings ,Ä¶ and we will find ways to bring some of it back to mother earth and behave in a manner what will aid her nearly or even more than what the minerals and metals are doing for her ,Ä¶ nilai,Ä¶ you say, that we multispecies bathed and evolved humans together with the

androids will be like the diamonds and gold and silver and iron for our mother earth, we will vibrate towards her in assistance of the great task to dance all together in most satisfying and life honoring swirls and turns, twitches and bends

30 beehive fascination

this philosophical exchange went on for many hours, the full assembly of friends researchers filled the rasip appartement with a festive auras... visitors were asked to come two weeks later as the group wanted to focus completly towards the finishing of the cell assemblies what would serve as initial growth stimulation for the approaching date of start to grow 10 000 androidsthe friends were bathing a lot together swimming dancing loving each other in great ways of wonderment how each got into union with other species and elementssome told the others who were listening fully how they imagine to combine their features with the ones from the other researchers... their wishes and imaginations shared trough voice and drawings they projected live at the ceiling... were kind of instructions for the awakening mind in the pool as the cells assembled in several groups were exchanging constantly their new findings how to evolve more smoothly and intelligentsamewise will the androids be informed what are planned to be grown starting in some daysthe programs developed by mansulei mirael with programmers and the friends occasionally providing background info how they assume their cells grew into each other the gentle non manipulating splicing way... the android grow tanks would be projected with light colours audio... that being the only software transmission or installingthe final application and operatingn system would be to great parts designed by each one android by itself ... johno was also at the party festive time... he being one of the fews near to the friends group who was still pure human but perhaps not any longer as it seemed that he misses out on all the butterfly winged batlegs growing ... also to be a mango instead of eating one, that could be worth to leave humanity state behind and enter mutantia... not a nice word that perhaps preoccupied ... multispecies living ones... being a nicer but less strong short .. multilives...hour after hour he stayed and listened openly as it would be important for his android venture but also more and more for himself... and then again he reminded himself that he wanted to be respected by the fellow business community what perhaps too will try to stay in pure human state as for the same reason... to be accepted as a caution responsible person who would not become multilives just like that out of an impulse but would wait how the first 10000 would come out of their growth a growth what is highly influenced by the atmosphere in the room the android would growthe android grow tank would be a mostly closed air but with air being supplied by the steering of the supply amounts ... this steering again being influenced by the growing andodroid itself as well as with the supervising uncle who was

either one or many persons partly spending time in the earth hut who hosted the android grow tank also uncles can be anyone who watches the grow tank and sends his/her goodluck wishes or compares the microscopic filming of the growing parts of the android body.... the nurturing fluid in the tank allowed the cells islands to communicate with each other the several parts of the future android bodies would grow simultaneously beside each other in the tank, sometimes swimming around to test different organ neighbourhoods while also forming the connecting muscles tendons and nerves... mirael and mansulei were now joining johoh in his thoughts and soon the group followed with their attention johoh was a bit surprised how his thoughts on how the setup of the growing phase would look like.. he was positively surprised to experience the group mind... he felt their attention towards his thoughts and started to tell them... the conversation switched now on to how the android grow tank would allow the several cell assemblies to build one connected individual... perhaps even that would not be guaranteed, eventually one grow tank would release an entity what felt happy to walk fly swim as a swarm of hundreds of handsized autonomously moving parts what could stretch their connecting nerve communication exchange over great stretches of physical distance... mirael... i see a swarm of bees what are collecting all kinds of informations materials and can fly away from their central gathering living space, the hive... many kilometres... with finding home again... mansulei... are you sure we have bee genes in our pool.... nilai... but we have butterflies who are not really builders of hives (?) but can dance together quite close and feel probably an intense community connection... i am still learning on the emotional level as well as rationally what happened since i got the blessing of the butterfly tribe on the boat driving up the maonzia river nandofer ava and rumu were now taking some time to tell the other friends how they have once made an excursion some weeks ago out into the rasip surrounding countryside ... they danced in a high meadow having paid some money for them trampling down the high grass in advance to the farmer who itself was an alternative easy going person who cut the high grass to fabricate by hand some healing herbs pillows and garments like scarfs... when they felt safe to try out their multivibes abilities, they spontaneously also built themselves for some moments into flowers giving out intense waves of flowerlike scents what attracted thousands of bees the bees were landing on their naked bodies to lick up their sweat... and then it happened that all three of them whom already knew the multispecies upgrading well from their many hundreds of hours bathing with luoma... it happened that the three dancers felt the psychic presence of the hive mind who sent them greetings and thanks for providing this unique scent combinations what felt beneficial to their lifestyle the group bee mind offered the three to be of assistance any time they wanted to become beelike... with the three not refusing at all but mentally asking if they could merge right now as they surely wanted to be as magnificent and caring and work enthusiastic like bees... even if the goal of the friends group was to help create organisms who would minimise the required work to live decently.... the bees were heroes in the dancers mind... the bee mind was ready to fusion sensing this heroification vibes.... nandofer ava and rumu enjoyed the transmission much very gusto it was an experience what they could barely describe... like if

all ones separate thinking processes would be understood in one moment....
like thousands of instruments playing one harmonic song... that was too
much for joho... he could not abstain any more ... he wanted to be a
beehive same with all of the friends and not long as there were
hundreds of flowers swimming on the surface of the pool and many thousand
bees in the rasip appartementas allways, the rasip appartement was 24 hours
365. days online with hundreds of camera feeds some of them microscopicfor
joho and mansulei and mirael as the leading persons in the commercial
rollout... this was a bit or quite totally unexpected... who would watch us
becoming a bee hive and still want an android companion who probably could
decide to form its body into hundreds of bees... but then they let go of
the doubts and enjoyed to visit the flowers

https://archive.org/details/beehive_201411this is the 30th text, written
today ... while thinking parallel about a deeper description of the
childrens birth in the pool or how the group was very happily living
together for many months in the rasip appartement, everyone wanting to join
the family spirit what lasted longer than the android prototype finish and
android mass growings starting ... with the babies, the 13 became a real
family ...like 2 generation family ... but then, everyone can feel at home
with allmost anyone if one is open and honest and wishes to feel at home
with each other ...

31 archive.org/details/thepreparationstostartgrowing100000bionts

after the13 transformed back from bee swarms into mostly human shapes, some
started to counciously metamorph single parts of their body with different
animal and plant characteristics behaviour... perma and nilai modelling
themselves in concerto with others too building small groups of 2 to 4
nilai formed her left arm into a swarm of butterflies with a human hand
what flew on its own with batwings, her other arm being bees and the hand
human too flying with 20 cm diameter butterfly wings... her torso was
partly human partly fox fur covered with her legs coming from the chameleon
side mixed with tree propertiesher hair being brown sea algaeperma drew
herself hairs like banana rasta and her skin was coconutbuttery, the arms

and hands she did same like nilai with the legs being more flowerlike with reptile characteristics and her vagina being a wet fig human flesh symbiosisthese combinations of multiple species at the same time in one body did inspire several who watched live on the net to paint them what resulted in an other wave of sculpturists and theater creatives to improvise on the theme bringing in their favorite multispecies combinationshow got fox fur growing abilities into the cell... that was the achievement of nandofer ava and rumu too after their astonishing unexpected but highly appreciated merge with the bee communityin a meadow outside of the rasip citythe three dancers went to walk in a nearby forest where they picked some wild berries and mushroomsit was there they found an injured fox who was kind of sensing their extraordinary state of being.. multispeciesly merged multilife beings ... so the fox barked from under its earthhole hiding... ava intuitivly new what to do, she peed in front of the fox and he did lick her pee from the groundshe was sitting beside the fox to hold the palm of her hand over the female fox body with the hand moving automaticly over to the wounded area on her left stomach siderumu and nandofer too were sitting beside ava to place their hands lightly on her shoulders as to support her in transmitting healing energy to the fox.... after several minutes when ava felt great hit and pulsations flowing trough her the foxes wound what was not deep but widely spread... perhaps she had a fight with an other fox ... ava noticed the wounds closing and she lay her hand on to the space where it was bloody cut just moments ago... she caressed the vixen and felt at this touch her own body taking up the fur and fox skin essence knowledge abilities... nandofer too as well as rumu felt the thank you of the wixen... she and her global fox tribe have checked them out for good and given part of their knowledge to the human species via avathe brown sea algae hairs was an effort of ascende who was enjoying on his way from nacary islands to rasip some good quality hours of merging with the brown large sea algae... also perma meditated with him in the brown sea algae underwater forests at the shores of nafrecthe ability to mix human chameleon tree skin with flower building build instructions ... came probably together with the bee upgradethe fig was a fruit ascende and perma had found to be quite sexually stimulating on the nacary islands to meditate shapeshift in their fruity flesh softnessjoho and mirael as well as mansulei were quite happy with their decision to be multilivers at the evening of the prototyping phase in such a researchers family settingprototype perhaps not too correct a title for this timeframe as it was more like the final phase of gathering multiple species cell samples as well as observing their interactions the pool was filled with life of various states of own intelligence and selfawarenessbut the group has yet not asked the sing groups of cells to build themselves into a human like beingit did not seem to be needed, everyone was confident that the interest of the people who asked to deposit of 10000 given to joho s enterprise to have a meeting arranged with a somewhat artificially grown android or golem as one could call it... a symbiont... an organic body grown with a great variety of human animal and plant cell materials in urine, saliva, skin, hair, blood, sperm female ejaculation fluids, a artilife being potentially willing to be a companion to the human sponsor, an android talentso the group partied on while all the records got

integrated into the data pool what would be given via loudspeakers and light projections into the grow tanks what have been built of clay and glass in the earth huts of south nacrima and the land of naci the humans who were willing to deposit 10000 have studied the terms and are well aware that they could not expect their eventual future companion as they would want them to be, they might have an indepth understanding of the human sponsors whole essence or complete soul spectrum so if they were wishing the companion like a human of the opposite sex athletic and sexually attractive the android talent would perhaps be a mix of plant features and animals and some other human attributes like instead of boy/girlfriend the human part would be a mother/father type of style or a human wishing rose flower like hairs might get an android growing orchids as skin toppings also how the artificial beings might go on eliminating the jobs the human sponsors performed... no certain route was either programmed nor to be projected as the android consciousness thanks to its roots in nature of human animals and plants... this newly evolved shapeshifting beings could not be predicted in their possible logics what in itself was an exciting factor who fascinated the human sponsors, to be surprised on the behaviour of an android towards one's own features conditioning's mind and heart patterns joho was now becoming interested to help provide thought and feeling observations towards the soon to start 10000 grow phase mansulei and him were now questioning the need for an airtight setting... eventually the air borne particles would be effortlessly integrated and used as building blocks by the ursuppe from the rasip pool the plan was to equip each grow tank with initial rasip pool water of 1 to 10 litres ... the group would bath again together and ask the pool mind to help dividing itself in 10 000 equal portions of all cell assemblies... or perhaps the 10000 water bottles from glass were totally individual with each bottle containing just this cell types what would be needed in respect of the future interaction with just this human sponsor this being aided by the informations who why deposited 10000 were also projected into the pool with text light projectors so the pool mind read the contact request and accordingly divided itself when one of the group filled a bottle of rasip pool water this pool mind some months later would decide to inhabit the placenta of minai and leumi after they gave birth to a boy and a girl in the pool about 8 month after the 10000 were started to be grown... mirael... the setting of the earth hut, if the android or golem or biont would be grown in a 3 diameter bowl built with clay or glass or any combination of the materials... would have an influence and perhaps be given to the several thousands of uncles watching the cell assembly multiplications in the grow tanks... the uncles might spontaneously be guided to cover the grow tanks with a glass kuppel or filter the air in the hot otherwise eventually to burn incense style or and pray be happy dance sing ... all the human spectrum might be more of an important factor towards influencing the grow conditions important would be a soft handling of the fluids and great connection of the uncles with their inner own self in order that they really listened to the collective mind in the earth hut... kind of fine mesh of individual goals what are trying to find their common smallest understandings of each other... and build on top of it a shape and behaviour pattern of this or that cell gathering patch floating on the

dilluted rasip pool waterthe mesh would build itself according to one the info in the pool second the info of the uncles being in the roomso the growers attention would be of a contributing factor to the success of the biont devellopment

32 the first 300 000 androbionts ...<https://archive.org/details/thefirst300000androbionts>

the 100 000 bionts were quickly deposited for and each depositing human started sending in information about his/her life , with the intention that these details about the eventual future companion could help the android symbiont to build itself according to the future task a companion relationship with this specific human would need to fullfill some sponsors did even moved near to the earth hut where this particular biont would be growing so he too could visit the grow room or even apply to grow his/her own symbiotic companion... with applying meaning towards the biont, at a stage in the grow process when the growing cell assemblies could communicate with their grow helpers uncles sponsors if the biont wanted its sponsor to be also its grow uncle, that was cool, but other bionts decided that there might be some good growing time without too much expectations or wishes to interact... the family of friends researchers were quite busy filling all the 100 000 bottles, visitors and fans of the project were helping too as well as some of the uncles who were excited to see the mother pool where it all came together it took some weeks of filling bottles and shipping them to south nacerima and the land of nachi where the earth huts and grow bassins were allready prepared the many thousand grow uncles or android biont grow supervisors were learning as much as they could from the recorded history of the rasip appartement plus, mirael and mansulei were now visiting each one of the grow places to make sure that the atmosphere was most beneficial for the growing ascemde, perma, and nilai too were in south namecira to aid the setup of the grow tanks luoi and luoma travelled to nachi land to do the same only mundu, leumi and minai staid in the rasip appartement where they wanted to experience a wonderfully harmonic birth at this time luemi and minai were around 3 month in their pregnancy the growth of the first wave of android bionts completed itself in about 2 months, with most sponsors coming to the grow hut regularly during the growing and to be there when the growth would be completed as the sponsors were allmost all broad minded people who knew of the whollistic concept around an eventual companionship, nearly all of the first 30000 android bionts agreed into engaging in to a sustainable long term relationship with their sponsors the next phase of android biont growing commenced with the metabolism side products of the freshly built androids, their cell samples and urine and stuff gave the next batch a starter soup to grow in at the time when all of the friends researchers were back in rasip to witness the birth of luemi and minai s babies, all

100 000 previously wanted to be companions androids were successfully grown and found their human sponsors to be worthy to engage with in a world improving relationship just some couple of hundreds did not find a suitable understanding with their sponsors in which case johno returned the 10000 money deposit back to the human sponsor and the androids were either travelling the earth as sovereign beings without fixed relationships to human beings but spontaneously helping here and there to fix problems some of them chose to be companions to johno to help him set up next growings, some dozens wanted to be with the friends research group, also looking forward to their project of growing 200 000 androbionts without money deposits who could engage with any one persons who wanted their help the 30000 huts what had grown successfully each 3 generations of androbionts in the last 6 months, with the grow uncles haven given ownership of hut and grow facilities after the first successfull androbiont grow the grow supervisors who were mostly students of biology, chemistry and physics who did this work together with their families , were given 3000 money for each successfully grown androbiont an other 5000 was invested by johno mirael and mansulei to build the hut, with satelite communication and all the projectors, cameras, pipes, sensor equipment and gadgets for the grow bassins/tank what made 14000 money spent on each hut growing 3 androbionts bringing in 30000 to johno of the 16000 profit per hut, at 30 000 huts, it gave johno an overall brutto profit of 480 millions, from that he donated 50 millions towards the friends group project to grow 200000 androbionts for the general welfare of humanity the families of the grow supervising uncles were all very happy caring and nurturing the androbionts and most all of them wanted to be part of the next growing phases, especially as mirael and mansulei together with the friends group found it nothing but fair that each grow hut would have an androbiont grown for the purpose to grow next generations of bionts so, with the friends group retreating after the successfull part one grown 100000 bionts and the 50 million allready reinvested in long term grow contracts with the supervising families... the grow huts were being built out and additions built onto them, bigger and more grow bassins installed resulting in the doubling of the grow capacity within the next six months around 50000 androbionts were then being instructed to watch about all future growings the friends group was delegating the introduction processes ... which androbionts would be introduced to which eventual human companions... totally to the supervising families who all shared the friends group ethos of the androbionts enabling the overall reduction and elemination of work needed to be performed with the supervising families soon finding that the androbionts wo performed the caretaking tasks so well were even better talented to choose the human applicants who would have a chance to apply to become companions for their fellow androbionts in the growing many thousands of humans applied with reasons their androbiont companions to perform environmental clean up tasks and social welfare activities the world human population in general was kind of surprised to see more and more androbionts moving around independently from their human companions... for example... a human who lived in an area where people threw plastic and metal drink cans carelessly on the floor resulting in the garbage polluting rivers and flowing into the sea to be a danger for marine animals.... such humans came to the growing

huts and asked the supervisor androbiont if they might ask androbionts in the growing if they would fancy a task to collect this thrash in the streets, recycle the material, donate the money from the material recycling to the poorest humans in the area ... and additionally perform entertaining street standup comedy shows with what education could happen eventually toward the people possibly changing their littering habits other animal welfare concerned humans would ask androbionts in the growing if they could drive around in a mobile kitchen where they would give out free of cost vegan meals to the poor and everyone who wanted to try vegan food again other hundreds of humans were asking for androbion companions who would go around offering everyone in need its labour power.... with 100000 androbionts of the first commercial wave who also partly did general welfare activities and were greatly inventive to eliminate their human companion jobs... eliminating them through automation, efficiency improvements, mechanical, biological and physical system processes upgrades... plus the 50000 of the second wave who supervised the growing and distribution of the other 150000 "free of charge" androbionts.... there was nearly no corner of the globe what was not aware of this androbionts going around eliminating the need for work... for good ... as it was witnessed that every human companion did fare very well with the androbionts services... whether this services were benefitting themselves directly or the greater human community in general there was no hostility happening nowhere towards the androbionts, also aided by their very great abilities to sense their surroundings... what a sight it was for the slum kids who collected the plastic garbage in the streets when an androbiont came to divide itself in hundreds of bee bat butterfly creatures with human hands who did all the collecting ... changing into one big flying manta like creature who could transport hundreds of kilo materials towards the recycling depots... how proud the children to have a multilives multispecies enabled androbiont helper who would give all the money from the selling of collected trash materials to the children... so... the 300000 androbionts now active 24 hours 365 days... they did not need sleep as they have incorporated a most wonderful balance of photosynthesis charging both of sun and moonlight as well as parallel to their outer tasks of performing needed work or making processes more efficient... they were inwards creating a constant modelling of the utopian worlds what they could see to be fitting for both themselves as well as humans and animals and plants...this imagination capability was given to the androbiont gene pool mostly through luoi's pioneering work ... plus the fireglow ability mundu once learnt when he was meditating... most of the androbionts were not eating food or drinking water, but were beside their tasks also clearing the air flowing through their lungs from pollutants and upcycling the rainwater what touched their bodies... with all the good they did so many hours a day in the outside as well with their imaginations inside... their aura was highly beneficial to everyone who stayed some moments near to them as the androbionts became aware of this, they often made visits in hospitals and walked around there, making jokes, holding hands, smiling randomly at people.... at certain times they would change from one animal into another, caressing the sick humans, butterfly winging kissing their cheeks, changing into giant lilies and growing as waterflowers in an

spontaneously formed pool in the bath tubes of the patients sick rooms it was not surprising to joho as well as to the friends research group that each month the interest for androbiont grew double joho interests were not well beyond money making, he did park his 400 millions profit he made from the first 100 000 androbionts... to see what would happen when the friends group would invest the 50 million to grow the second batch of 200000 androbionts... with them having invested in the 30000 grow huts in south mareica and the land of nicha becoming bigger being able to grow 3 bionts in 2 months... he decided to follow their example and invest 300 million in infrastructure what would allow him to offer 600 000 newly grown androbionts each two months, 3million and 600 000 bionts within a year... he was very fond of the decentral approach, how a student and his perhaps not so wealthy family would take care of the growth of a small numbers of androbionts in their own home... perhaps a family with a 300 sqm house or several smaller huts connected, could watch over the growth of 5 androbionts... with the major part of the work being performed by the first androbiont they helped to grow as the chief supervisor for the following generations so he invested 300 millions into the build of 120 000 family homes with grow facilities for 5 androbionts each, with the families only needing to work watch observe actively the first 2 month, after that initial growth of the future androbiont supervisor, the family would have 200 to 250 sqm of the 300m2 total space to themselves to do whatever they felt was suiting them, while the androbiont grown under their loving caring eye would itself take charge over the 50 to 100 sq meters where the grow bassins tanks pools were groups of humans doing philanthropic, environmental and social welfare work... were approaching joho with interests to ask hundred thousands of the androbionts if they would aid them in their world fixing enterprises as joho was now becoming more and more philanthropic himself, he was very happy to be of service to this groups of people doing good deeds... he did not ask them for any money deposit but gently reminded them that the androbionts working with them might go ways and perform actions what were beyond expectation and in best case would eliminate the need for the good deeds to be performed...

33 androbionts bring abundance

the androbionts did walk around most of the times on their own, doing the work they have agreed with their human companions plus inventing new ways to get rid of this work in a sustainable fashion for example the androbionts who were cleaning up plastik trash were pooling money they had been given when selling their artisan produces they manufactured out of some unique trash pieces from this pool they invested into the fabrication of biodegradable packaging material the many thousands of them managed to get such big amounts of money together that they could fabricate the bioplastic in great quantities what was offered at half of the price petrol based

plastic was asked for other androbionts were asked to stay longer times in the hospitals as the doctors and nurses could see major improvements of the healing times with patients who had been visited by androbionts these hospitals too donated money to the androbionts what they pooled to found their own healing houses again other abions did write hundred thousands of texts with exact and detailed rules of combining them in this or that manner so their jobs of being a secretary or case manager in an office was automated to more than half ... what gave many free hours in a day they spent on further improving the work by for example creating little machines what could do the physical tasks like delivering letters or packages with piles of paperwork... these machines were built from scrap materials and some essence of themselves like saliva urine and sweat what they could produce when eating more food and drinking more fluids they absolutely needed what was nearly nothing thanks to their sophisticated combination of photosynthesis, fireglow and light imagination these machines were having displays and wheels cameras and sometimes propeller and wings for air deliveriesthey were a beautiful mix of upcycled trash, androbiont life juice essence, bioplastic of their own brand... the androbionts who were regularly conferencing with each other sharing success data and agreeing on future fields of money investments.. were accessing each others data collections to a degree what previously was agreed upon with the human companions most of the human beings who were in a constant relationship with their chosen anbios did have full confidence that their androbiont friends and companions were using all their gatherings for the greater humanity animal plant harmony on this planetspace exploration was not on the androbionts agenda, they saw that much to be fixed on this earth and oceans that it needed full attention... there were some single androbionts in relationships with astroresearchers who performed some work on their behalf in the various belts of atmosphere thinning around the globe as the original friends research group was observing all this initiatives inventions efficiency improvements they felt relieved and happy like fathers and mothers knowing that their children were healthy and growing fine into adulthood as they were watching the two newborn with their mothers swimming in the pool, ascende and perma started to speak out their relief thoughts... ascende... how wonderful these many hundred thousands of anbios are linking together to create symbiotic improvements, evolution wherever they influence the human society... perma... yes they are so highly sharing, it makes me know that we were right to continue our research into multispecies organic cell mergings... ascende... seeing johno investing all his profits from the first commercial 100000 anbios, gives me hope that perhaps not far from now other investors too might start growing anbios... when nilai joins them to say... perma, perma you have been so wise in giving your cell mergings with the chameleon as a base to the genepool, this strong link with the chameleon allows the anbios to fit in perfectly by understanding the surrounding in great details in order to create a pattern on their outer body shape what would just meet the expectation or the desire of the surrounding on what was pleasant ... luoi... i think that the imagination drive too does its share of fitting in respectively colouring the aura in a colour combination interval pulse what has healing capabilities... perma... yes luoi, the imagination and loving towards all

beings, that are strong contributors for the healing power of the anbios...
mundu joyning in... and what about the lava i incorporated in awahi...
nobody speaks about that much these days when we see anbios eating to make
machines ... what about the great goal of getting un industrial and stop
producing so much...luoma now helping her brother... ya mundu, it looks
quite a bit like the system gets lighter and less resources consuming, but
we have not seen yet the radical changes one could hope for...ascende....
like for example the bioplastic factories and petrol plastic industry both
stop producing because the human beings spend most of their time in nature
using very little food ... the worldwide mass productions being replaced by
human and antibio handcrafted few items what a human being could want to
use... luemi and minai left the rasip pool with their 1 month old babies...the
rasip pool was inhabited by two placenta based lifeforms... super
placenta enablers ... suplenas... what were like spielkameraden collueges
for the two babies.... minai... oh luemi, how well we understand our babies
how well the suplenas play with them, thank you from the bottom of my heart
that we came together here to the rasip pool with leaving awahi... luemi...
do not worry, we will fly soon to awahi or nacaries islands or to ecgre or
wherever we can be near to natural wildlife, but for the moment, i believe
are the suplanas one of the best transforming enabling friends for our two
little ones... perma... mmh girls i think you shall not take the rasip pool
not too long for your exclusive use as there are other human beings who are
waiting to visit the rasip pool... ascende... but perma, they can build
their own pools now, with all the anbios now having access on microscopic
camera recordings of all the cell evolution via mergings all we know
in our cells all the anbios have access too as they have an even better
higher networked internal organisation structure, their anbios cloud of
data is probably xtimes mightier and richer as what we 13 human enhanced
individuals have the possibility to sub or super counciousnessly be
registered----ascende s argument were being agreed upon and johu too was
confirming that the androbionts who worked with him on equipping 120 000
new earth built grow huts... the androbionts could grow easily next
generations with their own urine and salivaso then the visitors who
previously were coming once a week or once a month to be upgraded, just
shared a bath with their androbiont companions or kissed with tongues or
drank their urine ... soaked their skin with urine of the ever evolving
androbiontsnot long after was a fast growing community finding themselves
to evolve quickly towards the same level of multilives multispecies cell
mergings as the androbionts who shared their essences with humansthe rasip
appartement became more of a museum where once a month someone wanted to
see the superplacentaenablers and wanted an upgrade with themmmmmhhh... or
it could have been the other way round, more and more visitors wanted to
see and feel the embrace trough a suplanabler instead of drinking their
androbiont companions urinewhatever way, there were now hundred thousands
of human beings who followed the androbionts and asked respectfully for
some drops of androbiont essence, when they felt upgraded enough, they
joined into the good work of eliminating tasks by enheighten the
efficiencies of structural processeswhile johu could provide 3 and a half
million new grown androbionts a year, the androbionts itself did share
their essences to the extent where in every year several hundred humans

could upgrade from one androbionts urine it did take around 5 years till half of humanity was evolved to the same height as the androbionts of the first generation, with an other fourth part staying up to date with the latest androbiont operation systems ... and one fourth of humanity refused completly to get upgraded but wanted to stay purely human 5 years after minai and luemi gave birth to the babies in the rasip pool, the problems of the world were solved, humanity had built themselves thanks to the androbionts improvements a liberal society what allowed anyone to travel anywhere stay how long it felt good for the local community and the travellers, everyone could consume how much or how little of anything, everyone had access to the local reesources and the local communities would care dor each others fair share of sustainably harvested fruits of nature ascende perma and nilai were living still part of the time in the rasip appartement, partly in the nacary islands with flying also to the north sea and the frica continents shores as dovd feather clad butterfly winged bats... mundu was experimenting with his body being a huge flying disc like a frisbee of 10 diameter with leumi and minai and the 5 year young girl and boy playing beside him forming all kind of geometric shapes from their bodies---the androbionts themselves did also pool money to grow more androbionts themselves, ones who were not introduced to human companionships but could commit themselves to any task they found fitting thanks to this crowdfunding approach what lay deep in the androbionts behaviour mode, many human beings who had no house and did not own any land before the androbionts came, were now either growers of androbionts with actually not doing any required watching or observing as the android symbionts themselves did thr uncle supervision thing or they got a life sustaining ship as home what could fly in air and vakuum space as well as under water many human beings chose the ships, kind of a third of humanity was now on the move in the manother third was staying in their traditional rented appartements with their androbionts companions securing their incomes and the third part of humanity being a bit shy to let the androbiont change their lives to greater extents the changes in the world were great and lasting, the androbionts were accepted by a majority of the society as welcome agents for improvements

34 a does not know exactly how to become the apple instead of eating it

luoi and minai talked about the command structures in the grow processes of the symbiont androids...luoi... for me, the beauty lies in the growing processes being guided by many kind of independent sources and from multiple sides... and the being what grows itself is one of the guiding forces... it seems that traditional master-slave or client-server relationships are not fitting here...minai... this is the one thing what gives me most hope for my child that it will grow up in an open environment what welcomes everyones unique participation...luoi... as we are now

observing a global connection between the active androbionts, it shows us that there is no central leadership of one or a few androbionts over the others.....minai... i am so very happy for this, i would not want my child to be a puppet of any group, even if it is to heal and clean and improve something, it is very important that each participant of a group has the organisational freedom to chose from several possible activities what could help furthering the group goals ... and ... in the ideal case... can create unique contributions what are appreciated exactly because of this uniqueness...luoi... the androbionts as well as the two suplenas we are witnessing are constantly adapting their abilities towards the natural rich heritage of mother earth and combining these abilities following the needs or preferences of the momentary situation... minai... possible or highly probable that every individual androbiont as well as the suplenas and upgraded humans like us having multicellular mergings experienced and integrated in our core operating system... that all of us have a high degree of autonomy... luoi... means that one androbiont or suplena or multicellular human can do something completely unique in response to the harmonic or disharmonic circumstances, also in response to other change enabled beings...minai... if i look at myself and my child and it with the suplenas ... we are changing our shapecombinations and featuremix costumes in a fashion what seems to grow in creative patterns the more we get new species to join the joyfull circle of multispecies multilifers... minai...and we have not really looked at what the animals and plants take with from our human heritage after we merge with their donorcells ... possibly it is the mental emotional what gets involved with the animals and plants and elements...luoi...when i was a treelike being for weeks in the nogco bassin... i somehow felt being content as a tree to be rooted into mother earth... would not wanted to walk around like a human or fly like a butterfly... but then it might have been me idealizing the vertical cosmic antenna function of a tree ... for sure i can not say anytying except that i was extremly gratefull to sink into the depths ot the tree counciousness for some brief moments of my life ... sometimes i see myself changing into tree again for minutes at the time to revisit this cosmic verticality, i could not even say if the trees would be guided by a forest oversoul or community structure ... minai... how can we understand the freedom of a deciding mechanism when not on the creativity of possible choice shapes the structure of people allows its members... if my child would theoreticly overboard itself once, i can count on an androbiont or suplena or evolved human being to be in his vicinity to help my child find a decision what is benefical for itself and all... dictatorship where one individual cheats another individual, where one takes another one s fair share of available ressources... seems not to be furthered by the highly autonomous pack swarm cloud we changlings are demonstrating in these days that is when ascende and mirael come into the discussion... ascende asks luoi what she thinks of the several sex practices in relation to the dictatorship dominance and submission theme... while minai and mirael are listening too, wondering if this would stay with words or if there would be some sexy exercising , minai was cool towards both possibilities, luemi was flying on the countryside with the two children the author has not yet read their names , as it would involve reading back in the novel, what again would perhps feel

like worka is a strong believer in a military free world and that utopia is possible with the least imaginable amount of violence happen in reality....luoi ... look ascende, you are an anal fetishist, you like being visited into your rectum as well as to let your penis soak up another beings rectal microbacterial fauna... difficult to put that in a box of dominant or submissive... me too like to put my finger in your anus and play softly with your nerve endings at your anus rim... and i like to be rubbed to, my asshole be licked and penetrated in a sloe but deep movement.... ascende... i think that i lean more into pushing harder with receiving softer anal enterings ... but i would like to balance that out by stop pushing so hard and listen better to the rythm of my partner what signalises very clearly... a movement towards the intruding one means yes continue in this manner, a movement away means please slower finerminal and mirael were handling each others bodies at this moment in the most unspeakable or unimagineable or the athor feels uncable of describing various animal plant and human physical body combinations what lick squeeze enter each others body openings with all kind of sized penises fingers tonguesoh that is typical for a, when it comes to core moments of philosophical debates... distract with erotic as in there is a certain tolerance for violent behaviour... or the author wants to talk about his personal sexual fantasies.. mmmhh ... anyway, the point here being...luoi saves herself from the lusty feelings rising up in her while analyzing her and ascendes anal meetings...she says...the android symbionts will not succumb to one person, nor do the suplenas in the pool do what minai or luemi do , and i did see in our basicly human friends research group that we were mostly supporting each othes wishes for self fullfillment and the common goals were agreed upon with thoughtfull prior exchange of several aspects to the decision.....mirael ... who just some seconds ago had ejaculated his semen into the thankfully receiving human mouth of minai... came into the discussion...luoi, you are a good kisser, how we could possibly describe our tongues dancing with each other, our mouths sucking eating each others mouth bacterias and saliva... luoi... how rough you say that indicates you are emotionally detachched some way alont your lifeline... we might have some more kissing time later today, yes ?... with mirael shining out of his face like a sun at rise... yes my dear i would very much like to learn kissing with you againminai was meanwhile sucking ascendes penis, he massaged her head with soft fingers... pulled her hair when he asked her to press harder with her cheeks and tongue towards his errected pillarluoi seeing this, she gives it up to continue the research on how impossible dictatorship military and systeminbuilt regular planned use of violence as punishment and or robbing another group of its fair share on the global ressources... her sexual lust was asking for its time to roar through her, storm up trough her from the middle of agai towards the fellow sex partner and down to the mother again... but the sexual bliss travels also trough fellow beings horizontally... sideways sex blessings as well as up to the sky...luoi kissed michael on his belly first, then on his mouth, engaging in a fingering each others genitals, the two were petting long timeascende now was lying under minai to lick her pussy lika a cat licks milk...half an hour later the four have satisfied their appetite for each others juices and come back to the overiewing of the evolution

since perma moved into the rasip appartement 4 years ago.... humanity has successfully mastered the transit from a human dominated globe towards an all species appreciating each others lifes to let live togetherness... since some thousands of human beings have journeyed into the multicellular mergings with other species and hundred thousands of androbionts grew up being a fine combination of human and animal and plant genes with the potential to merge with even the elements specific wisdom essences... there are still billions of human beings who do not want or do not believe it to be possible... to think that the hunger could one day cease to be ... or.. to believe that air transported pollen might be enough substance to nourish the body of a human being... or that the imagination... the memories what one had of sunny moments in ones life ... would one day possibly a main food... that human skin would be able to take on photosynthesis abilities... this story is about ending the hunger in the creation itself, may all beings be able to feel... if they want to...nurtured and loved in all times and spaces, may pleasant comfort allow relaxed optimistic bodymindsoul flowthe research what has been portayed in the approximatly 42 000 words so far in this novel... is not an exact one or a repeatable, there are no fixed patterns but eventually returning similarities in the wheel of transformation... or is it a triangle o modulation, a quadratic change of angles on how fast how high how slow and low we need to do what pull or push, give and receive at what conditionsone could wish that there would be a potentiality for such a gentle cell merging to help humanity one day to move away of the techniques what force the seperate cell typed into each other... geneticly modification of organism.... but then, the author a does not really know how this could possibly happen in greatest detail... but.... magic ?!... there is room for the not yet form u lated... perhaps it needs to be said, perhaps it would be better to leave it up to chance.... wishcraft that wording here is a bit, some times more some times less... the author with his various points of narration, strategic or subcounciously created figures in the story.... bla and bla.... one could wish that all creatures and species would be compatible to each other, without cut and paste, without knives and forks, that our anusses mighth one day smell of roses and the tiniest bit of highly welltransformed shit comes to bless the community... we want to cherish each other without death being the bridge... we want to celebrate each others continuation of life and not weap about the surprisingly necessicity of killing each other for survival... this author believes in a state of existance with no pain needed to be inflicted on anyone, but he as well as his protagonists can only guess how this vague dream bridge could look like... how exactly one could be ... the very apple one desires to eat

35 mansulei looks back and forwards

35 mansulei was writing a somewhat allencompassing overview on the friends

research of the last 5 years and johos successful investments culminating in a millions strong decentrally connected global community of android symbionts and multilives human upgraded beingshe did start with a philosophical introduction to whom it may concernwhen i, mansulei of the friends research group, write this, it is my very own personal account of how i see look at the happenings of the five last yearsascende and perma started to collect cell materials from animal and plant species with the overguiding motto or ethic preference, that what they were humbly asking for was skin cells from animals and plant material what was given in joy, not taken with intention, but given to them in a way of being blessed ... the cells being offerings toward the goal of humanity grow further into responsibility, sustainability towards stepping much lighter on planet earthpermas meditation at the chameleon place ... when she moved from her nature hut in the nacary islands to the rasip appartement ... she did so to be near ascende, to create a stronger aura of two people instead of being alone... also the artificial environment of the rasip place may have helped them to concentrate onto their wish the cells they got donated with might grow together in an selfguided way somehow, without cutting dissolving remixing the cells in a traditional genetic manipulation fashion but to create an environment, although artificial with petri dishes and bioreactors ... still it was an environment what allowed permas skin cells to merge with the chameleon in love given cells... and she could then successfully integrate them into her working organism, with ascende following her path himself too succeeding to take up photosynthesis capability trough his skin cells having merged in the petridishes nurtured by microalgae from the bioreactors and psylocibin mushrooms as well as cannabis flowers grown inside the appartements aeroponics and fughi grow chambersthey took this first huge step in a weeks time, what in itself is posing the question to me if possibly their enterprise was being helped by ancient or future human like pathways... were there already human beings having successfully achieved an upgrade of their bodies towards multispecies cells merging in symbiothic smooth and gentle growing into each other ? were they travelling the earth at that very moment when perma did her first bath with the merged cells... was this selfrealize being or multiple of them watching over the two friends all the time... possibly back from the future to direct their supportive thoughts and emotions ... and or was it the collective cloud of later android symbionts what went back in time to be there in the appartement... the cloud of experiences, real happenings of a being growing itself together from several types races species cells... i do like to think of that being one possibility... so i give thanks forward and backwards in time to all creation, to all individual beings who have helped this cause with their supporting councious supporthow do two cell types grow into each other ? without being cut open or injected into each other, sequenced and sliced into fragments but simply given into the same petri dish with a tiny spoonadded microalgae and psychoactive plant essences... was it the act itself of them gently being given into this round little bassin where they both could take their own time to get to know each other... these hours and days when ascende and perma looked into the petridishes hoping to witness with their naked eyes and the microscopic cameras.. a symbiosis of the two cell types... was

their thoughts and emotions motivating the cells, and was a much stronger... cloud of it allready happened for the good of the whole planet... in the rasip appartement flowing into the bioreactors funghi chambers aeroponics and petri dishes as well as into perma and ascende... eventually all of the three contributing forces were even deeper founded and helped by the planetary cloud of potential, maybe agai gaia and the ascended beings, the angels and elemental godsimilar forces were rejoycing at this moment when the mergings happened...maybe the authority is none of all that, maybe all the names and concepts of angels, god and godesse, ascended beings... are distracting me from what it is... it is the road to a fine exchange of information, instead of eating the apple the multilifes multispecies cellfused human beings and the symbiotic symbiotic ? androids golems partly artificial beings could be that very apple in their own now apple fruit flesh and skin and apple seeds... instead of building a shelter from earth against cold weather and strong winds... everyone of the friends researchers could now burn or consume tiny amounts of flower pollen what would get them trough the night, or perhaps tiny bits of fruits ingested what helped them sustain their inner fire glow what the friends research group got donated some months into the prototyping phase when joh alleady had asked me and mirael to translate the friends research material what was open source all along the way, translate this knowledge gathered in experiments towards android lifeforms whom human beings could ask to be their companionsas written just some lines above, there were some months in between of perma s chameleon merge and mundu fireglow ability aquiringi am drifting here extra towards the underlying core things... what is the core motivation of a being what has left its single species ness behind to seek mergings symbiosis mutual sharing of genetic heritage with all possible reachable forms of life, forms and shapes of elemental compositions, looking to become one with the elements... to me it seems to be in great deep and high balances equilibrium with all relatives, to be in an agreement coming from sharing experiences understanding of each others uniqueness.... an agreement what would allow one to be exactly what one wishes to be in that moment on either body and or thinking and or feeling level of existance... this satisfaction to have reached home, to have arrived at being one with all, would result or lead to the state of abundance, an satisfaction what would not give way to a hunger or thirst but if one would follow to satisfy ones levels of existance with this amount of life joy ... in gentleness, in respectfull humblety... could one day no tree need to grow apples anymore as there would be no one wishing to eat them, neither human nor bird ? could we live on a planet where the plants and evolved humans as well as multicellular animals would flower and not welk, but constantly sending each other pollen with our very own spores of life style

36 these are the questions what do concern my core being a lot questions what are pathing forward or inward towards a state of existence who would be only minimally consuming of what is given by fellow plants and animals... eventually what nilai experienced when the bats trusted her and flew so near to her body that some of their saliva dropped on her skin perhaps the bat saliva was at this time for nilai already nurturing like food, as she was already with ascende and permas chameleon human photosynthesis capabilities thanks to her baths in the rasip pools... and did she took up the butterfly essence from their wings possibly what would be some excellent fine information if one is ready at this moment to receive the bounty of a fellow planetary species and as always the thought comes up what possibly did the animals did take with... we have not yet looked into that enough to confirm the assumption that they would take with if not human qualities but the abilities of one's cells merging with cells of another fellow animal and plant species if they profited from that possible blueprint of how species different cells can grow into each other most gentle smooth gradually, it would not mean that they would feel the need to actually translate this access to cosmic paths into their own personal or swarm flock species common behaviour i assume ... writes mansulei in his memoirs and viewback ... that there are a number of animals and plant slowly getting more intimate with this possibility... but then, it seems to be superstitious and too arrogant to believe that a's fantasy writing could describe a real animal and plant future evolution... i as mansulei can write how i understand the symbiotic androids and us multilives human as well as the sublenas... not too much i really understand about the deeper rules of how cells grow into each other... but my research is observing and documenting what i see and experience in a world or a fantastic realm where a the author could arrive in 10-50 years... as mansulei knew from ascende who is one of the authors main imposing projecting wishes for himself... but then, also my actions and the one of all the other 12 researcher friends is appealing to the author... in fact as he named himself in an artistic name androgyneas... he very much liked to wish for himself a sexchange but one without scalpels and needle and thread... a sexchange what grew from inside and has the wish power to reform ones genitalia hips breasts and motherly organs... ascende told me once how he was in another storyline also together with perma bathing in wildlife pools growing multispecies with lots of urine and cannabis flowers psilocybin mushrooms... he was then trying to grow himself into a female human to the core but enhanced with the same qualities we experience in this rasip appartement ah yes, mansulei that is me writing this ... the question... is psilocybin and thc really necessary or even helpful... from our standpoint now in the future, yes, very helpful but not necessary probably any plant essence or animal droppings might grow together in a non psychedelic growth environment, one would hope so as not all hallucinogenics grew everywhere on the planet... again a wild guess looking from the reality of the authors view of the world in the past from me mansulei writing this review of our friends research 5 years what possibly... ah that is too much of a sentence come on ... sorry... the thing is that this author does not do his learning quite seriously so that most of the future past uncertainties could be described as separate possible or really parallelly

occurring actual future timelines.... like... the author could write with certainty deeper and fuller descriptions of the scenes when two species marry somehow... there might be a certain training factor here coming into play as the author likes many different paths outlined in a sketch... so this writing of 2014, kind of 60 000 words in 12 months on the ascende fantasy theme are a sketch, a writing exercise for an other book or fourth storyline where a or i or the author could bath into richer descriptions and give the reader some quality guided meditation like dream imagination background

explanatory ... why this line of writing and are there others

i am longing to become one with all the genetic richness this planet has cultivated since millions of years, i tried to fantasize how that practically could happen in a soft, non surgical way ... in a series of fantastic texts i wrote this summer

[https://archive.org/details/
UtopiAnimalohumanPlantorgasmoMetamOrph14texts](https://archive.org/details/UtopiAnimalohumanPlantorgasmoMetamOrph14texts) ...

where the protagonists spend some very intense time in nature and search for intimate connections with the living ... both material and spiritual ... as with the temperatures getting colder i began to shift my story focus on the inside ...with

<https://archive.org/details/lamourlamourpermaandascendeinparis>

the merging of human and animal and plant cells seem already to demand less intensity ... with both story lines setting the focus on the love and the joy, the human intention wanting to merge with all fellow life ... both storylines have explicit eroticism in it, i ask myself if it is of a chauvinist sort as i am not all too well grown out of my male sex drive patterns ... if that comes over like that, i ask the cultivated evolved

reader to forgive this deficiency, with having a compassionate eye onto the vital life embracing energy the lusty moments can bring when one faces the sometimes quite gigantic seeming task of becoming really in the material ... one with all what is ... in 2007 i have managed to write a text what is actually the first of the ascende line ...

<https://archive.org/details/ascende>

... in this text what has no erotic language at all but mostly focus on philosophy ... one of the main pillars is the concept that in a possible near term future, humanity does give back great parts of the land what we now occupate for agriculture ... give it back to wildlife ... and we would retreat our food growing via aeroponics, bioreactors etc. inside our living rooms, flying ships, skyscrapers... i was studying the idea of breatheranism, nurturing oneself from light ... and as being raised in the christian belief ... i do carry in me the strong wish that it might be possible for the lion to lie beside the lamb without having to harm it ... so i wrote about it in that vision where we humans retreat and give lots of space to wildlife ... with additionally trying to support the animal predators with vegan protein ... looking back today when i myself am exercising myself in veganism ... i still believe that the elegance and strenght, the vitality and quickness of the predator could somehow be transformed from the hunt scenario ... into what ? ... i believe that the human being has a great influence with his behaviour on the fellow animal species, most of all because of our machines and weapons ... sad ... it is ... we encage, bind, imprison so many of our fellow animals ... constantly but to return to what we could do ... let us assume we could share our wealth, the fruits of both mother nature and our technological progress ... between all human beings ... and with that probably end stealing, robbing, cheating ... killing each other in wars based on quarrels about materials ... this our compassionate sharing between ourselves would eventually also positivly influence the animal species what are now released as nobody really wants anymore to eat another brothersister animal ... eventually the human peace in the material square could ripple out onto the animal inter species relations ... but this is all theoretical ...

i personally tend towards technology being the bed in where human animal and plants could eventually find more whollistic interconnections and grow higher deeper fuller nearer to the one ... but then also ... it could well be possible totally without tech ... just the land, the water, the air, the life forms touching each other in multiple spheres, dimensions, parallel realities ... perhaps it is not a question of wether with machines or without, wether with implants or prostetics, with natural medicine/drugs or synthetic substances ... perhaps one important question could be ... how do i imagine my very own personal journey to the bigger me, my future self ...

how can i channel my future self

Publication Date: December 4th 2014
